**Automated Image Analysis of FISH--stained Cell Nuclei** Hans Netten,1997      **Fundamentals for the Assessment of Risks from Environmental Radiation** Christa Baumstark-Khan,Stanislav Kozubek,Gerda Horneck,2013-12-01 Human health as well as aquatic and terrestrial ecosystems are threatened from increasing levels of environmental radiation of various sources many of them of anthropogenic causality large areas of the former Soviet Union suffer from radioactive pollution in particular after the Chernobyl accident the increase in the incidence of UVB radiation at the Earth's surface as a result of a progressive depletion of stratospheric ozone is a global problem that requires international concerted actions in areas of former uranium mining the natural radiation level is substantially increased due to elevated radon levels a growing portion of the population involved in air traffic is exposed to increased levels of natural radiation and with the International Space Station an increasing number of astronauts will be exposed to the complex field of cosmic radiation To estimate the corresponding risks a better knowledge of the underlying radiobiological mechanisms at the molecular cellular and system level is required This book is the result of a multidisciplinary effort to discuss the current state of knowledge of the fundamental processes that result from interactions of environmental radiation ionizing as well as UV radiation with living matter and the existing radiation protection concepts and then to define future research work needed as fundamental information for the assessment of risks from increased levels of environmental radiation to human health and ecosystem balance It comprises the key lectures and statements presented at the NATO Advanced Research Workshop      **Neural Networks: Best Practice In Europe - Proceedings Of The Stichting Neurale Netwerken Conference 1997, Progress** Bert Kappen,Stan Gielen,1998-01-15 The area of automorphic representations is a natural continuation of studies in number theory and modular forms A guiding principle is a reciprocity law relating the infinite dimensional automorphic representations with finite dimensional Galois representations Simple relations on the Galois side reflect deep relations on the automorphic side called liftings This book concentrates on two initial examples the symmetric square lifting from  $SL_2$  to  $PGL_3$  reflecting the 3 dimensional representation of  $PGL_2$  in  $SL_3$  and basechange from the unitary group  $U_3(E/F)$  to  $GL_3(E/F)$  The book develops the technique of comparison of twisted and stabilized trace formulae and considers the Fundamental Lemma on orbital integrals of spherical functions Comparison of trace formulae is simplified using regular functions and the lifting is stated and proved by means of character relations This permits an intrinsic definition of partition of the automorphic representations of  $SL_2$  into packets and a definition of packets for  $U_3$  a proof of multiplicity one theorem and rigidity theorem for  $SL_2$  and for  $U_3$  a determination of the self contragredient representations of  $PGL_3$  and those on  $GL_3(E)$  fixed by transpose inverse bar In particular the multiplicity one theorem is new and recent There are applications to construction of Galois representations by explicit decomposition of the cohomology of Shimura varieties of  $U_3$  using Deligne's proven conjecture on the fixed point formula      World Congress on Medical Physics and Biomedical Engineering
