Risk Management in Outer Space

Activities Maria A. Pozza,Joel A. Dennerley,2022-02-09 Risk Management in Outer Space Activities assesses selected risks associated with space activities from an Australian and New Zealand perspective The book explores the rise of commercial space activities and considers the development of Australia and New Zealand s regulatory frameworks and how they are equipped to address new and emerging risks in the space sector The book examines the juxtaposition of international space law against the domestic legal regimes of Australia and New Zealand and how these regulatory frameworks are designed to create governance mechanisms to control space risk Both national jurisdictions approach space risk from the perspective of liability and international legal obligations but as a result of their different historical space trajectories their risk approaches differ This is illustrated by research that suggests that from an Australian point of view much of its space industry

development has been influenced by Cold War era military and national security concerns On the other hand the New Zealand perspective is grounded on the rapid market led commercial development that is currently underway in the country The book examines a variety of risks that can and do emerge in the course of undertaking space activities It does this by presenting a series of space risk case studies There are chapters devoted to examining commercial space risks space insurance the risks posed by space debris cybersecurity and space assets light pollution as a risk for astronomy and the risks inherent in landing objects on the Moon The work contained in this book is intended to provide a clear practical and informed approach to understanding risk management in outer space activities It will appeal to policy makers risk professionals space lawyers national space agencies as well as academics researchers and students

Jakhu, 2010-07-23 The legal regime of outer space as enshrined in the Declaration of Legal Principles Governing the Activities of States in the Exploration and Use of Outer Space General Assembly Resolution 1962 XVIII adopted in 1963 and in the 1967 Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space including the Moon and Other Celestial Bodies while prohibiting the appropriation of space by any means envisages exploration for the benefit and in the interest of all countries on a basis of equality and in accordance with international law Freedom of scientific investigation is also contemplated Elaborating on these instruments the Assembly in 1996 adopted the Declaration on International Cooperation in the Exploration and Use of Outer Space RES 51 122 in which it called for heightened international cooperation with particular attention to be given to the benefit for and the interests of developing countries and countries with nascent space programmes Thus it is self evident that the outer space regime including the 1972 Liability Convention envisages the conduct of national activities for the benefit and in the interests of all countries irrespective of their degree of economic or scientific development In this regard Article 6 of the 1967 Treaty not only provides for national activities in outer space but for international responsibility whether such activities are carried out by governmental agencies or non governmental entities and aims at ensuring that national activities are conducted in conformity with the Treaty
