## Automorphic Forms On SL2 R:

**Automorphic Forms on SL2 (R)** Armand Borel, 1997-08-28 An introduction to the analytic theory of automorphic forms in the case of fuchsian groups

**Automorphic Forms Beyond  $\mathrm{GL}_2$**  Ellen Elizabeth Eischen, Wee Teck Gan, Aaron Pollack, Zhiwei Yun, 2024-03-26 The Langlands program has been a very active and central field in mathematics ever since its conception over 50 years ago It connects number theory representation theory and arithmetic geometry and other fields in a profound way There are nevertheless very few expository accounts beyond the  $\mathrm{GL}_2$  case This book features expository accounts of several topics on automorphic forms on higher rank groups including rationality questions on unitary group theta lifts and their applications to Arthur's conjectures quaternionic modular forms and automorphic forms over functions fields and their applications to inverse Galois problems It is based on the lecture notes prepared for the twenty fifth Arizona Winter School on Automorphic Forms beyond  $\mathrm{GL}_2$  held March 5-9 2022 at the University of Arizona in Tucson The speakers were Ellen Eischen Wee Teck Gan Aaron Pollack and Zhiwei Yun The exposition of the book is in a style accessible to students entering the field Advanced graduate students as well as researchers will find this a valuable introduction to various important and very active research areas

**Holomorphic Automorphic Forms and Cohomology** Roelof Bruggeman, Youngju Choie, Nikolaos Diamantis, 2018-05-29

**Families of Automorphic Forms** Roelof W. Bruggeman, 2010-02-28 Automorphic forms on the upper half plane have been studied for a long time Most attention has gone to the holomorphic automorphic forms with numerous applications to number theory Maass 34 started a systematic study of real analytic automorphic forms He extended Hecke's relation between automorphic forms and Dirichlet series to real analytic automorphic forms The names Selberg and Roelcke are connected to the spectral theory of real analytic automorphic forms see e.g. 50-51 This culminates in the trace formula of Selberg see e.g. Hejhal 21

Automorphic forms are functions on the upper half plane with a special transformation behavior under a discontinuous group of non euclidean motions in the upper half plane One may ask how automorphic forms change if one perturbs this group of motions This question is discussed by e.g. Hejhal 22 and Phillips and Sarnak 46 Hejhal also discusses the effect of variation of the multiplier system a function on the discontinuous group that occurs in the description of the transformation behavior of automorphic forms In 5-7 I considered variation of automorphic forms for the full modular group under perturbation of the multiplier system A method based on ideas of Colin de Verdiere 11-12 gave the meromorphic continuation of Eisenstein and Poincaré series as functions of the eigenvalue and the multiplier system jointly The present study arose from a plan to extend these results to much more general groups discrete cocompact subgroups of  $\mathrm{SL}_2(\mathbb{R})$

**Modular Relations and Parity in Number Theory** Kalyan Chakraborty, Shigeru Kanemitsu, Takako Kuzumaki, 2025-08-19 This book describes research problems by unifying and generalizing some remote looking objects through the functional equation and the parity relation of relevant zeta functions known as the modular relation or RHB correspondence It provides examples of zeta functions

introduced as absolutely convergent Dirichlet series not necessarily with the Euler product The book generalizes this to broader cases explaining the special functions involved The extension of the Chowla Selberg integral formula and the Hardy transform are key substituting the Bochner modular relation in the zeta function of Maass forms The book also develops principles to deduce summation formulas as modular relations and addresses Chowla's problem and determinant expressions for class numbers Many books define zeta functions using Euler products excluding Epstein and Hurwitz type zeta functions Euler products are constructed from objects with a unique factorization domain property This book focuses on using the functional equation called the modular relation specifically the ramified functional equation of the Hecke type Here the gamma factor is the product of two gamma functions leading to the Fourier Whittaker expansion and reducing to the Fourier Bessel expansion or the Chowla Selberg integral formula for Epstein zeta functions

Number Theory Kazuya Kato, Nobushige Kurokawa, Masato Kurihara, Takeshi Saitō, 2000 This is the third of three related volumes on number theory The first two volumes were also published in the Iwanami Series in Modern Mathematics as volumes 186 and 240 The two main topics of this book are Iwasawa theory and modular forms The presentation of the theory of modular forms starts with several beautiful relations discovered by Ramanujan and leads to a discussion of several important ingredients including the zeta regularized products Kronecker's limit formula and the Selberg trace formula The presentation of Iwasawa theory focuses on the Iwasawa main conjecture which establishes far reaching relations between a p-adic analytic zeta function and a determinant defined from a Galois action on some ideal class groups This book also contains a short exposition on the arithmetic of elliptic curves and the proof of Fermat's last theorem by Wiles Together with the first two volumes this book is a good resource for anyone learning or teaching modern algebraic number theory

Proceedings of the International Congress of Mathematicians S.D. Chatterji, 2012-12-06 Since the first ICM was held in Zürich in 1897 it has become the pinnacle of mathematical gatherings It aims at giving an overview of the current state of different branches of mathematics and its applications as well as an insight into the treatment of special problems of exceptional importance The proceedings of the ICMs have provided a rich chronology of mathematical development in all its branches and a unique documentation of contemporary research They form an indispensable part of every mathematical library The Proceedings of the International Congress of Mathematicians 1994 held in Zürich from August 3rd to 11th 1994 are published in two volumes Volume I contains an account of the organization of the Congress the list of ordinary members the reports on the work of the Fields Medalists and the Nevanlinna Prize Winner the plenary one hour addresses and the invited addresses presented at Section Meetings 1-6 Volume II contains the invited address for Section Meetings 7-19 A complete author index is included in both volumes the content of these impressive two volumes sheds a certain light on the present state of mathematical sciences and anybody doing research in mathematics should look carefully at these Proceedings For young people beginning research this is even more important so these are a must for any serious mathematics library The graphical presentation is as always with
