Automorphic Forms Shimura Varieties:

Automorphic Forms, Shimura Varieties, and L-functions Laurent Clozel,J. S. Milne,1990 **Automorphic Forms and Shimura Varieties of PGSp (2)** Yuval Z. Flicker,2005 The area of automorphic representations is a natural continuation of studies in the 19th and 20th centuries on number theory and modular forms A guiding principle is a reciprocity law relating infinite dimensional automorphic representations with finite dimensional Galois representations Simple relations on the Galois side reflect deep relations on the automorphic side called OC liftings OCO This in depth book concentrates on an initial example of the lifting from a rank 2 symplectic group PGSp 2 to PGL 4 reflecting the natural embedding of Sp 2 in SL 4 It develops the technique of comparing twisted and stabilized trace formulae It gives a detailed classification of the automorphic and admissible representation of the rank two symplectic PGSp 2 by means of a definition of packets and quasi packets using character relations and trace formulae identities It also shows multiplicity one and rigidity theorems for the discrete spectrum Applications include the study of the decomposition of the cohomology of an associated Shimura variety thereby linking Galois representations to geometric automorphic representations To put these results in a general context the book concludes with a technical introduction to LanglandsOCO program in the area of automorphic representations It includes a proof of known cases of ArtinOCOs conjecture **p-Adic Automorphic Forms on Shimura Varieties** Haruzo Hida,2004-05-10 This book covers the following three topics in a manner accessible to graduate students who have an understanding of algebraic number theory and scheme theoretic algebraic geometry 1 An elementary construction of Shimura varieties as moduli of abelian schemes 2 p adic deformation theory of automorphic forms on Shimura varieties 3 A simple proof of irreducibility of the generalized Igusa tower over the Shimura variety The book starts with a detailed study of elliptic and Hilbert modular forms and reaches to the forefront of research of Shimura varieties associated with general classical groups The method of constructing p adic analytic families and the proof of irreducibility was recently discovered by the author The area covered in this book is now a focal point of research worldwide with many far reaching applications that have led to solutions of longstanding problems and conjectures Specifically the use of p adic elliptic and Hilbert modular forms have proven essential in recent breakthroughs in number theory for example the proof of Fermat s Last Theorem and the Shimura Taniyama conjecture by A Wiles and others Haruzo Hida is Professor of Mathematics at University of California Los Angeles His previous books include Modular Forms and Galois Cohomology Cambridge University Press 2000 and Geometric Modular Forms and Elliptic Curves World Scientific Publishing Company 2000

Milne,1990 **P-Adic Automorphic Forms on Shimura Varieties** Haruzo Hida,2004-05-10 *Topological Automorphic Forms* Mark Behrens,Tyler Lawson,2010-02-22 The authors apply a theorem of J Lurie to produce cohomology theories associated to certain Shimura varieties of type U 1 n 1 These cohomology theories of topological automorphic forms mathit TAF are related to Shimura varieties in the same way
