Topographical Tools for Filtering and Segmentation 2 Fernand Meyer, 2019-01-23 Mathematical morphology has developed a powerful methodology for segmenting images based on connected filters and watersheds We have chosen the abstract framework of node or edge weighted graphs for an extensive mathematical and algorithmic description of these tools Volume 2 proposes two physical models for describing valid flooding on a node or edge weighted graph and establishes how to pass from one to another Many new flooding algorithms are derived allowing parallel and local flooding of graphs Watersheds and flooding are then combined for solving real problems Their ability to model a real hydrographic basin represented by its digital elevation model constitutes a good validity check of the underlying physical models The last part of Volume 2 explains why so many different watershed partitions exist for the same graph Marker based segmentation is the method of choice for curbing this proliferation This book proposes new algorithms combining the advantages of the previous methods which treated node and edge weighted graphs differently
