Computational Intelligence In Software Engineering:

Computational Intelligence in Software Engineering Witold Pedrycz, Mehmet Aksit, 2004 *Computational Intelligence in Software Modeling* Vishal Jain, Jyotir Moy Chatterjee, Ankita Bansal, Utku Kose, Abha Jain, 2022-02-21

Researchers, academicians, and professionals expone in this book their research in the application of intelligent computing techniques to software engineering. As software systems are becoming larger and complex, software engineering tasks become increasingly costly and prone to errors. Evolutionary algorithms, machine learning approaches, meta heuristic algorithms, and others techniques can help the efficiency of software engineering.

Computational Intelligence in Software Engineering Witold Pedrycz, James F. Peters, 1998. This unique volume is the first publication on software engineering and computational intelligence. CI viewed as a synergistic interplay of neurocomputing, granular computation including fuzzy sets and rough sets, and evolutionary methods. It presents a unified view of CI in the context of software engineering. The book addresses a number of crucial issues: what is CI, what role does it play in software development, how are CI elements built into successive phases of the software life cycle, and what is the role played by CI in quantifying fundamental features of software artifacts. With contributions from leading researchers and practitioners, the book provides the reader with a wealth of new concepts and approaches, complete algorithms in depth, case studies, and thought provoking exercises. The topics coverage include neurocomputing, granular, as well as evolutionary computing, object oriented analysis and design in software engineering. There is also an extensive bibliography.

[Computational Intelligence In Software Quality Assurance](#) Scott Dick, Abraham Kandel, 2005-10-19. Software systems surround us. Software is a critical component in everything from the family car through electrical power systems to military equipment. As software plays an ever increasing role in our lives and livelihoods, the quality of that software becomes more and more critical. However, our ability to deliver high quality software has not kept up with those increasing demands. The economic fallout is enormous: the US economy alone is losing over US 50 billion per year due to software failures. This book presents new research into using advanced artificial intelligence techniques to guide software quality improvements. The techniques of chaos theory and data mining are brought to bear to provide new insights into the software development process. Written for researchers and practitioners in software engineering and computational intelligence, this book is a unique and important bridge between these two fields.

Computational Intelligence Techniques and Their Applications to Software Engineering Problems Ankita Bansal, Abha Jain, Sarika Jain, Vishal Jain, Ankur Choudhary, 2020-09-27. *Computational Intelligence Techniques and Their Applications to Software Engineering Problems* focuses on computational intelligence approaches as applicable in varied areas of software engineering such as software requirement prioritization, cost estimation, reliability assessment, defect prediction, maintainability, and quality prediction, size estimation, vulnerability prediction, test case selection and prioritization, and much more. The concepts of expert systems, case based reasoning, fuzzy logic, genetic algorithms, swarm computing, and rough sets

Software Engineering with Computational Intelligence Taghi M. Khoshgoftaar, 2012-12-06 The constantly evolving technological infrastructure of the modern world presents a great challenge of developing software systems with increasing size complexity and functionality The software engineering field has seen changes and innovations to meet these and other continuously growing challenges by developing and implementing useful software engineering methodologies Among the more recent advances are those made in the context of software portability formal verification techniques software measurement and software reuse However despite the introduction of some important and useful paradigms in the software engineering discipline their technological transfer on a larger scale has been extremely gradual and limited For example many software development organizations may not have a well defined software assurance team which can be considered as a key ingredient in the development of a high quality and dependable software product Recently the software engineering field has observed an increased integration or fusion with the computational intelligence CI field which is comprised of primarily the mature technologies of fuzzy logic neural networks genetic algorithms genetic programming and rough sets Hybrid systems that combine two or more of these individual technologies are also categorized under the CI umbrella Software engineering is unlike the other well founded engineering disciplines primarily due to its human component designers developers testers etc factor The highly non mechanical and intuitive nature of the human factor characterizes many of the problems associated with software engineering including those observed in development effort estimation software quality and reliability prediction software design and software testing

Engineering with Computational Intelligence or SECI for short as a pioneering contribution to software engineering Breaking with the tradition of treating uncertainty imprecision fuzziness and vagueness as issues of peripheral importance SECI moves them much closer to the center of the stage It is obvious though still not widely accepted that this is where these issues should be since the real world is much too complex and much too ill defined to lend itself to categorical analysis in the Cartesian spirit As its title suggests SECI employs the machineries of computational intelligence CI and more or less equivalently soft computing SC to deal with the foundations and principal issues in software engineering Basically CI and SC are consortia of methodologies which collectively provide a body of concepts and techniques for conception design construction and utilization of intelligent systems The principal constituents of CI and SC are fuzzy logic neurocomputing evolutionary computing probabilistic computing chaotic computing and machine learning The leitmotif of CI and SC is that in general better performance can be achieved by employing the constituent methodologies of CI and SC in combination rather than in a stand alone mode In what follows I will take the liberty of focusing my attention on fuzzy logic and fuzzy set theory and on their roles in software engineering But first a couple of points of semantics which are in need of clarification
