alternatives practice has undergone a pendulum swing between stages that can be characterised as frontier economics radical environmentalism resource management allocation selective environmentalism and sustainable environmental management The next stage of management must answer such questions as Can there be a global uniform environmental strategy or Based on their characteristics can different issues different regions and different applications have unique environmental strategies Based on this premise the next stage of management may be identified as risk based sustainable environmental management The goal of this style will be the risk based long term harmonious management of economic resources and environmental preservation for health safety and prosperity of sustainable populations When evaluation of risk or risk based ranking of management alternatives enter the picture as part of the overall puzzle then social policy ethics and health issues assume a very important role in the management strategy Economic incentives and environmental constraints have to be considered harmoniously the main emphasis being placed on protection and preservation of human health and the long term sustaining of populations

Computational Methods in Multiphase Flow IV A.A. Mammoli,C.A.

Brebbia,2007-05-11 Fluid Dynamics is one of the most important topics of applied mathematics and physics Together with complex flows and turbulence multiphase flows remains one of the most challenging areas of computational mechanics and even seemingly simple problems remain unsolved to date Multiphase flows are found in all areas of technology at all length scales and flow regimes The fluids involved can be compressible or incompressible linear or nonlinear Because of the complexity of the problem it is often essential to utilize advanced computational and experimental methods to solve the complex equations that describe them Challenges in these simulations include nonlinear fluids treating drop breakup and coalescence characterizing phase structures and many others This volume brings together work presented at the Fourth International Conference on Computational and Experimental Methods in Multiphase and Complex Flows Featured topics include Suspensions Bubble and Drop Dynamics Flow in Porous Media Interfaces Turbulent Flow Injectors and Nozzles
