*Computational Models in the Economics of Environment and Development* A.K. Duraiappah, 2012-12-06 Computational Models in the Economics of Environment and Development provides a step by step guide in designing developing and solving non linear environment development models It accomplishes this by focusing on applied models using real examples as case studies Additionally it gives examples of developing policy interventions based on quantitative model results Finally it uses a simple computer program GAMS to develop and solve models This book is targeted towards university lecturers and students in economic modeling and sustainable development but is also of particular interest to researchers at sustainable development research institutes and policy makers at international sustainable development policy institutions such the World Bank UNDP and UNEP

*Mathematical and Computational Models for Congestion Charging* Siriphong Lawphongpanich, Donald W. Hearn, Michael J. Smith, 2006-06-05 Although transportation economists have advocated the tolling of urban streets as a mechanism for controlling congestion and managing travel demands for over 50 years it is only recently that this idea has become practical When compared to the alternative of building more roads congestion pricing in particular via electronic tolling is attractive and has been adopted in countries around the world Recent implementations in London Singapore and various cities in Norway as well as a number of projects in the United States have been judged successful This book presents rigorous treatments of issues related to congestion pricing The chapters describe recent advances in areas such as mathematical and computational models for predicting traffic congestion determining when where and how much to levy tolls and analyzing the impact of tolls on transportation systems The analyses and methodologies developed in this book provide Mechanisms that aid in determining and comparing congestion pricing schemes Methodologies for evaluating the efficiency of existing and proposed congestion pricing schemes A means to predict the impact of pricing on urban transportation systems Information essential to the financial and political success of congestion pricing programs

**Rethinking Environmental Justice in Sustainable Cities** Heather E. Campbell,Yushim Kim,Adam M. Eckerd,2015-05-15 As the study of environmental policy and justice becomes increasingly significant in today s global climate standard statistical approaches to gathering data have become less helpful at generating new insights and possibilities None of the conventional frameworks easily allow for the empirical modeling of the interactions of all the actors involved or for the emergence of outcomes unintended by the actors The existing frameworks account for the what but not for the why Heather E Campbell Yushim Kim and Adam Eckerd bring an innovative perspective to environmental justice research Their approach adjusts the narrower questions often asked in the study of environmental justice expanding to broader investigations of how and why environmental inequities occur Using agent based modeling ABM they study the interactions and interdependencies among different agents such as firms residents and government institutions Through simulation the authors test underlying assumptions in environmental justice and discover ways to modify existing theories to better explain why environmental injustice occurs Furthermore they use ABM to generate empirically testable hypotheses which they employ to check if their simulated findings are supported in the real world using real data The pioneering research on environmental justice in this text will have effects on the field of environmental policy as a whole For social science and policy researchers this book explores how to employ new and experimental methods of inquiry on challenging social problems and for the field of environmental justice the authors demonstrate how ABM helps illuminate the complex social and policy interactions that lead to both environmental justice and injustice
