Computer Networks and Simulation II S. Schoemaker,1982 Computer Networks and Simulation. Vol 2 S. Schoemaker,1982 Computer Network Simulation in Ns2 Neeraj Bhargava,Pramod Singh Rathore,Dr Ritu Bhargava,Abhishek Kumar,2019-12-24

Learn to design the Mobile Ad hoc Networks DESCRIPTION Network Simulation is the most sought after research field and it has now become an integral part of many research projects like commercial applications and academic research The networking and communications domain ranges from finding friends on social networking sites to medical diagnosis to smart cities implementation and even satellite processing In this book we have made an honest effort to make the concepts of network simulation easy all the basics programs are explained in an easy and simple manner in the NS2 simulator right from the installation part As the real time application of networking and communications is endless the basic concepts and algorithms are discussed using the NS2 simulator so that everyone from graduate students to researchers can benefit from this book

KEY FEATURES Installing NS2 and running simple examples Creating and incorporating the network module All the built in NS2 modules are explained in a comprehensive manner Details of Network Animator NAM and Xgraph Simple language crystal clear approach and a straightforward comprehensible presentation The concepts are duly supported by several examples

WHAT WILL YOU LEARN Readers will get to know a conspicuous difference of how NS2 is being utilized as a product device in research and business applications Today applying network simulations does not require a PhD Nonetheless there are a couple of assets out there that completely cover all the essential parts of actualizing networking and communications without expecting you to take the advanced math courses We believe that this book will help any individual who needs to apply network simulation without studying years of analytics calculus math and probability hypothesis

WHO THIS BOOK IS FOR The book is basically meant for all those graduate and research students who find the algorithms and protocols of networking and communications difficult to implement In this book all basic protocols of networking and simulation are discussed in detail with a practical approach Primarily beginners can find this book more effective as the chapters are sub divided in such a way that they will find building and implementing algorithms in NS2 interesting and easy

Modeling and Tools for Network Simulation Klaus Wehrle,Mesut Günes,James Gross,2010-09-22 A crucial step during the design and engineering of communication systems is the estimation of their performance and behavior especially for mathematically complex or highly dynamic systems network simulation is particularly useful This book focuses on tools modeling principles and state of the art models for discrete event based network simulations the standard method applied today in academia and industry for performance evaluation of new network designs and architectures The focus of the tools part is on two distinct simulations engines OmNet and ns 3 while it also deals with issues like parallelization software

integration and hardware simulations The parts dealing with modeling and models for network simulations are split into a wireless section and a section dealing with higher layers The wireless section covers all essential modeling principles for dealing with physical layer link layer and wireless channel behavior In addition detailed models for prominent wireless systems like IEEE 802.11 and IEEE 802.16 are presented In the part on higher layers classical modeling approaches for the network layer the transport layer and the application layer are presented in addition to modeling approaches for peer to peer networks and topologies of networks The modeling parts are accompanied with catalogues of model implementations for a large set of different simulation engines The book is aimed at master students and PhD students of computer science and electrical engineering as well as at researchers and practitioners from academia and industry that are dealing with network simulation at any layer of the protocol stack
