*Computer Work Stations* Herman R. Holtz, 2012-12-06 Most of us do not realize that we are living in revolutionary times To a large degree we are in a time of massive economic and industrial change and perhaps history will one day record this era as the Second Industrial Revolution Certainly we have been made aware of the decline of smoke stack industries and of the rapid rise of what might be called the information industries in the United States and presumably in most of the western world Several best selling authors have assured us that we must change or perish and a great many industrialists appear to agree Ironically we have also been all but promised a return to a modern form of that very cottage industry economy that the first Industrial Revolution wiped out Some of our leading savants envision individuals working at home on desktop computers connected via hardwire telephone to an employer's large central computer Will this come to pass Perhaps the industrial economic indicators appear to point in that direction although there are the problems of numerous laws and regulations labor laws and OSHA laws to name only two areas and ignoring for the moment the reaction of our labor unions that would be most difficult to reconcile with such an arrangement In a sense it is the computer that has brought about this condition
