**Computer-Aided Geometric Design** Fujio Yamaguchi,2011-06-28 Computer graphics computer aided design and computer aided manufacturing are tools that have become indispensable to a wide array of activities in contemporary society Euclidean processing provides the basis for these computer aided design systems although it contains elements that inevitably lead to an inaccurate non robust and complex system The primary cause of the deficiencies of Euclidean processing is the division operation which becomes necessary if an n space problem is to be processed in n space The difficulties that accompany the division operation may be avoided if processing is conducted entirely in n 1 space The paradigm attained through the logical extension of this approach totally four dimensional processing is the subject of this book This book offers a new system of geometric processing techniques that attain accurate robust and compact computations and allow the construction of a systematically structured CAD system **Cybernetics Approaches in**
