WILLIAMS, NOEL and HOLT, PATRIK (eds), *Computers and Writing: Models and Tools*. Oxford: Intellect Books, 1989, 166 pp., £17.95/$29.50.

This book is a collection of papers stemming from the first conference on computers and writing convened by the Communication and Information Research Group at Sheffield City Polytechnic in April 1988. The papers chart a flow of topics on computers and writing, beginning with models of how people write and how software can be developed to facilitate the many aspects of that process, and moving on to considerations in producing hypertext and computer-generated story writing, in which the author may be not an individual but a group of authors and finally the computer itself. As such, the book documents not only how computers can assist people in familiar forms of writing, but also how the nature of writing changes when writers are given access to software tools to enhance what they formerly did when writing.

Six of the books's nine articles are about the development of what are traditionally thought of as computer assisted writing tools. Three of these articles (those by Stefanie Cookson, Anthony Sanford and Linda Moxey, and Patrik Holt) describe such tools in conceptual terms, while two discuss particular implementations; i.e. Noel Williams's chapter on RUSKIN, a post-writing grammar and style checker that helps writers tailor work to a pre-established profile of genre, purpose and audience characteristics; and Mike Sharples, James Goodlet and Lyn Pemberton's article on Writer's Assistant, which helps writers at all stages to work in unorganized, non-linear organized and linear organized phases in order to reach a suitable level of linear-organized instantiation. A final article by Unni Hovstad rather optimistically assesses the prospects for a battery of programs to assist essay writing in grammar schools in Norway despite formidable constraints ranging from inability of students to type to shortages of computers, of time on task, of hard disk space, and of the promised programs.

Two of the remaining three articles discuss writing for hypertext. Patricia Wright and Ann Lickorish comprehensively detail considerations in using this medium, satisfyingly supporting their work with frequent reference to research. The authors discuss nodes, links and signposts to alert readers to possible actions with respect to linear, modular, hierarchical and multi-theme hypertext. Roy Rada's article is an experiential, quasi-empirical comparison of mainframe and HyperCard implementations of software supporting multiple authors collaborating in the creation of hypertext documents while facilitating the creation of semantic nets and the conversion of the hyperdocument into a linear printed document (a similar system, IBIS, was used by Sharples *et al.* in documenting design issues for Writer's Assistant). Despite problems in getting students to understand and seriously perform the tasks required, Rada's work suggests that paperless assignments in which students collaboratively produce something useful might serve as an alternative to the traditional and often fruitless term-paper mill.

In the final article not yet mentioned, Masoud Yazdani develops a theory of story telling and relates it to recent efforts in computer-based story generation. Yazdani's ROALD is
