Computational Models Of Discourse Artificial Intelligence:

Computational Models of Discourse Michael Brady, 1983-02-01 As the contributions to this book make clear a fundamental change is taking place in the study of computational linguistics analogous to that which has taken place in the study of computer vision over the past few years and indicative of trends that are likely to affect future work in artificial intelligence generally The first wave of efforts on machine translation and the formal mathematical study of parsing yielded little real insight into how natural language could be understood by computers or how computers could lead to an understanding of natural language The current wave of research seeks both to include a wider and more realistic range of features found in human languages and to limit the dimensions of program goals Some of the new programs embody for the first time constraints on human parsing which Chomsky has uncovered for example The isolation of constraints and the representations for their expression rather than the design of mechanisms and ideas about process organization is central to the work reported in this volume And if present goals are somewhat less ambitious they are also more realistic and more realizable Contents Computational Aspects of Discourse Robert Berwick Recognizing Intentions from Natural Language Utterances James Allen Cooperative Responses from a Portable Natural Language Data Base Query System Jerrold Kaplan Natural Language Generation as a Computational Problem An Introduction David McDonald Focusing in the Comprehension of Definite Anaphor Candace Sidner So What Can We Talk About Now Bonnie Webber A Preface by David Israel relates these chapters to the general considerations of philosophers and psycholinguists Michael Brady is Senior Research Scientist at the MIT Artificial Intelligence Laboratory The book is included in the MIT Press Artificial Intelligence Series

Computational Models of Mixed-Initiative Interaction Susan Haller, Susan McRoy, Alfred Kobsa, 2013-11-11 Computational Models of Mixed Initiative Interaction brings together research that spans several disciplines related to artificial intelligence including natural language processing information retrieval machine learning planning and computer aided instruction to account for the role that mixed initiative plays in the design of intelligent systems The ten contributions address the single issue of how control of an interaction should be managed when abilities needed to solve a problem are distributed among collaborating agents Managing control of an interaction among humans and computers to gather and assemble knowledge and expertise is a major challenge that must be met to develop machines that effectively collaborate with humans This is the first collection to specifically address this issue

A Computational Model of Explanatory Discourse Alison Cawsey, 1989 This paper will concentrate on the interactive aspects of the model and especially how these relate to work on conversation analysis The model is fully implemented and a preliminary evaluation has been done

Prague Linguistic Circle Papers Eva Haji?ová, Miroslav Cervenka, Oldrich Leska, Petr Sgall, 1995 This volume is the first one of the revived series of Travaux which was the well known international book series of the classical Prague Linguistic Circle published in the years 1929-39 The tradition of the Circle still attracts attention in broad circles of European and American

linguistics The first volume of the new series is divided into five sections 1 Introductory papers characterizing the development of the Prague School in the recent decades 2 Methodological issues of structural and functional linguistics 3 Sentence structure 4 Discourse patterns 5 Theory of literature In accordance with the tradition the volume contains contributions concerning issues of principle empirical linguistic studies and also papers from the theory of literature

Mann,2013-03-14 One of the aims of Natural Language Processing is to facilitate the use of computers by allowing their users to communicate in natural language There are two important aspects to person machine communication understanding and generating While natural language understanding has been a major focus of research natural language generation is a relatively new and increasingly active field of research This book presents an overview of the state of the art in natural language generation describing both new results and directions for new research The principal emphasis of natural language generation is not only to facilitate the use of computers but also to develop a computational theory of human language ability In doing so it is a tool for extending clarifying and verifying theories that have been put forth in linguistics psychology and sociology about how people communicate A natural language generator will typically have access to a large body of knowledge from which to select information to present to users as well as number of expressing it Generating a text can thus be seen as a problem of our ways decision making under multiple constraints constraints from the propositional knowledge at hand from the linguistic tools available from the communicative goals and intentions to be achieved from the audience the text is aimed at and from the situation and past discourse Researchers in generation try to identify the factors involved in this process and determine how best to represent the factors and their dependencies **Computer Models and Technology in Media Research** Rolf A.
