of 1987 the Center for Applied Mathematics and Computer Science at San Jose State University received a bequest of over  
half a million dollars from the estate of Mrs Marie Woodward In the opening article of this collection of papers Jane Day the  
founder of the Center describes the background that led to this gift In recognition of the bequest it was decided that a series  
of Woodward Conferences be established The First Woodward Conference took place at San Jose State University on June 2 3  
1988 The themes of the conference were the Theoretical Computational and Practical Aspects of Wave Phenomena and these  
same themes have been used to divide the contributions to this volume Part I is concerned with papers on theoretical aspects  
This section includes papers on pseudo differential operator techniques inverse problems and the mathematical foundations  
of wave propagation in random media Part II consists of papers that involve significant amounts of computation Included are  
papers on the Fast Hartley Transform computational algorithms for electromagnetic scattering problems and nonlinear wave  
interaction problems in fluid mechanics vi Part III contains papers with a genuine physics flavor This final section illustrates  
the widespread importance of wave phenomena in physics Among the phenomena considered are waves in the atmosphere

and the environment Two generic applications which resonate strongly with the central aims of the Radon Special Semester 2011 are forward wave propagation in heterogeneous media and seismic inversion for subsurface imaging As an example of the first application modelling of absorption and scattering of radiation by clouds aerosol and precipitation is used as a tool for interpretation of e g solar infrared and radar measurements and as a component in larger weather climate prediction models in numerical weather forecasting As an example of the second application inverse problems in wave propagation in heterogeneous media arise in the problem of imaging the subsurface below land or marine deposits The book records the achievements of Workshop 3 Wave Propagation and Scattering Inverse Problems and Applications in Energy and the Environment It brings together key numerical mathematicians whose interest is in the analysis and computation of wave propagation and scattering problems and in inverse problems together with practitioners from engineering and industry whose interest is in the applications of these core problems
