Architectural Thought Michael Brawne, 2003 Documenting the thought process and decisions that architects make is a difficult task but one that is crucial to an understanding of the development of architectural design through the ages This book addresses the deficiency in theoretical coverage of this process By looking at the practices and buildings of architects past and present the author incorporates history and philosophy in the search for a theory of design He explores the critical design stage which is at the core of so much architectural activity and which so strongly determines our attitudes to continuity and innovation and ultimately the nature of the buildings that are around us While providing an overview of the processes of architectural thought Brawne also extends the discussion beyond architecture into other design fields and suggests that the way architects design has implications over a wide range of endeavors Inside flap of front cover

Architectural Design Procedures Arthur Thompson, 1998-10-02 This book explains how architects obtain and administer work from the moment the contract is signed to the handing over of the finished building to the client and is an indispensable guide to all architecture students This second edition has been thoroughly updated and expanded It now includes significant additions to the section on design constraints a new section on quality assurance and management and information on new acts and regulations introduced since the publication of the first edition Other sections on subjects such as the Building Regulations use of computers and standard forms and letters have been brought up to date

The Collaborators:

Interactions in the Architectural Design Process Gilbert Herbert, Mark Donchin, 2016-03-23 Illustrated by critical analyses of significant buildings including examples by such eminent architects as Adler and Sullivan Erich Mendelsohn and Louis Kahn this book examines collaboration in the architectural design process over a period ranging from the mid 19th century to the late 1960s The examples chosen located in England the United States Israel and South Africa are of international scope They have intrinsic interest as works of architecture and illustrate all facets of collaboration involving architects engineers and clients Prior to dealing with the case studies the theoretical framework is set in three introductory essays which discuss in general terms the organizational implications of partnerships associations and teams the nature of interactions between architect and engineer and cooperation and confrontation in the relationship between architect and client From this original standpoint the interactive role of the designers it examines and reinterprets such well known buildings as the Chicago Auditorium and the Kimbell Art Museum The re evaluation of St Pancras Station and its hotel questions common presumptions about the separation of professional roles played by its engineer and architect The account of the troubled history of Mendelsohn's project for the first Haifa Power House highlights the difficulties that arise when a determined and eminent architect confronts a powerful and demanding client In a later era the examination of the John Moffat Building which

is less well known but deserving of wider recognition reveals how the fruitful collaboration of multiple architects can result in a successful unified design These case studies comprise a wide range of programmes challenges personalities and interactions Ultimately in five different ways in five different epochs and in five different circumstantial and cultural contexts this book shows how the dialogue between the players in the design process resonates upo **Designing Architecture** Andrew Pressman,2012-05-04 Designing Architecture is an indispensable tool to assist both students and young architects in formulating an idea transforming it into a building and making effective design decisions This book promotes integrative and critical thinking in the preliminary design of buildings to inspire creativity innovation and design excellence This compendium of individual wisdom and collective experience offers explicit guidance to students and young professionals on how to approach analyze and execute specific tasks develop and refine a process to facilitate the best possible design projects and create meaningful architectural form Here the design process from orchestrating client participation to finalizing schematic design is explored and illuminated The following material is presented to make the book a useful didactic tool for professional development explicit strategies for doing design rather than simply reviewing principles and precedents creative ideas in approaching and framing problems in design terms specific methods to translate ideas to culturally significant socially responsive and environmentally sensitive buildings techniques to integrate all levels of cognition from analysis to epiphany counsel on developing a personalized process for engaging design projects case studies augment the text and chronicle fascinating applications of the design process The essence of this book lies in an integrated and holistic approach to each unique project as well as fostering curiosity and exploration a departure from algorithms easy generalities or a formula for design Designing Architecture will inspire readers to elevate the quality of preliminary designs and unravel some of the mystery of creating the most beautiful responsive and responsible architectural design possible

Contemporary Architecture and the Digital Design Process Peter Szalapaj,2005 This book illustrates the scope and complexity of CAD in practice It directly links the intentions of creative designers to specific CAD techniques A series of case studies from key architectural practices extracts and analyses the key issues for CAD development **Proceedings of the**

La Roche,2017-07-14 The energy used to operate buildings is one of the most significant sources of greenhouse gas emissions While it is possible to reduce emissions through climate responsive design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive heating and cooling strategies This new revised edition is updated throughout and includes a new chapter on building simulations
