## Arithmetic Functions And Integer Products:

Arithmetic Functions and Integer Products P.D.T.A. Elliott,2012-12-06 Every positive integer  $m$  has a product representation of the form  $m = \prod_{i=1}^k p_i^{n_i}$  where  $v$   $k$  and the  $n_i$  are positive integers and each  $E_i$  I A value can be given for  $v$  which is uniform in the  $m$  A representation can be computed so that no  $n_i$  exceeds a certain fixed power of  $2m$  and the number  $k$  of terms needed does not exceed a fixed power of  $\log 2m$  Consider next the collection of finite probability spaces whose associated measures assume only rational values Let  $h(x)$  be a real valued function which measures the information in an event depending only upon the probability  $x$  with which that event occurs Assuming  $h(x)$  to be non negative and to satisfy certain standard properties it must have the form  $A x \log x + I x + 10g I x$  Except for a renormalization this is the well known function of Shannon What do these results have in common They both apply the theory of arithmetic functions The two widest classes of arithmetic functions are the real valued additive and the complex valued multiplicative functions Beginning in the thirties of this century the work of Erdos Kac Kubilius Turan and others gave a discipline to the study of the general value distribution of arithmetic functions by the introduction of ideas methods and results from the theory of Probability I gave an account of the resulting extensive and still developing branch of Number Theory in volumes 239 240 of this series under the title Probabilistic Number Theory

On the Correlation of Multiplicative and the Sum of Additive Arithmetic Functions Peter D. T. A. Elliott, 1994 The correlation of multiplicative arithmetic functions on distinct arithmetic progressions and with values in the complex unit disc cannot be continually near to its possible maximum unless each function is either very close to or very far from a generalized character Moreover under accessible condition the second possibility can be ruled out As a consequence analogs of the standard limit theorems in probabilistic number theory are obtained with the classical single additive function on the integers replaced by a sum of two additive functions on distinct arithmetic progressions
