Clinical Aspects Of Neutron Capture Therapy:

Clinical Aspects of Neutron Capture Therapy R. Fairchild, 2013-03-09 Since Locher first suggested Boron Neutron Capture Therapy BNCT in 1936 this theoretically ideal system has intrigued investigators Unfortunately the first clinical trials between 1951 1961 were not successful However they served to implant firmly the seed of BNCT the growth of which has been carefully nurtured at a number of locations world wide This fact is attested to by the ongoing clinical trials in Japan as well as by the presence of researchers from active groups in the ten countries represented at this Workshop In 1983 and 1985 the first and second international biannual symposia on BNCT were held in response to a resurgence of interest in this field In 1986 the DOE sponsored a workshop on NCT in large part directed toward evaluating the national effort and the various neutron sources available within the United States It now seems likely because of various factors including improved neutron beams and boron delivery systems which have made the modality more attractive that clinical trials will be initiated in the United States within the next few years This 1988 special workshop interspersed between the biannual international symposia represents an effort to seek ideas and advice on the clinical aspects of BNCT from all those diverse groups with a national commitment to this project Our purpose is to facilitate our endeavor to incorporate the best procedures and techniques in the upcoming clinical trials

Energy Research Abstracts, 1989 Topics in Dosimetry and Treatment Planning for Neutron Capture Therapy Robert G. Zamenhof, Guido R. Solares, Otto K. Harling, 1994 *Neutron Capture Therapy* Wolfgang A. G. Sauerwein, Andrea Wittig, Raymond L. Moss, Yoshinobu Nakagawa, Koji Ono, 2025-05-30 This book now in a revised and updated second edition provides a comprehensive summary of recent progress in boron neutron capture therapy BNCT BNCT is based on the ability of the non radioactive isotope boron 10 to capture thermal neutrons with very high probability and to release instantaneously two heavy particles with a path length of one cell diameter or less This in principle allows for tumor cell selective high LET particle radiotherapy In the past BNCT depended solely on fission reactor based irradiation facilities but the appearance of accelerator based neutron sources placed in hospitals has opened a new chapter for BNCT This edition covers all the important aspects of BNCT including neutron sources boron chemistry drugs for BNCT boron analysis and imaging dosimetry and radiation biology The use of BNCT in a variety of malignancies and also some non malignant diseases is extensively discussed BNCT is clearly shown to be a promising modality at the threshold of wider clinical application All of the chapters are written by experienced specialists in a language that will be readily understood by all participating disciplines
