

Using Artificial Intelligence for New Material Discovery

Materials
Advances

Amorphous alloys allow for lower deposition temperatures than crystalline materials, enabling complex transistor architecture

However, more techniques are needed to screen new materials' properties and gauge their practical suitability

? Can artificial intelligence help screen new amorphous materials?

Calculated properties of simple binary amorphous structures based on known crystals

Trained machine learning (ML) models to predict properties of complex oxides

Optimized an objective function to find ideal candidates in the full chemical space and validated these results

The ML model could predict the properties of amorphous oxides

Elements considered:
