The Architecture of Intelligence Derrick De Kerckhove, 2001 A refreshingly unconventional look at architecture and the World Wide Web Using Vitruvius classical text *De Architectura* as a starting point De Kerckhove begins a journey into the exciting world of the Internet On the one hand he explores the architecture of this revolutionary medium on the other he considers the wide ranging opportunities which the IT world offers for architectonic design revealing how this new medium for communication is as much based on tradition as on innovation Derrick de Kerckhove is the Director of the McLuhan Institute and Professor at the University of Toronto His research into the effects of innovative technology on human communication of new media on traditional culture have gained worldwide recognition *Artificial Intelligence and Architecture* Stanislas Chaillou, 2022-03-07 History and Panorama Artificial Intelligence s AI encounter with Architecture is still in its infancy However current experiments and applications already are a testimony to their gradual intersection This book provides an introduction to the topic through the triple lens of History Application and Theory A chronology of Architecture s technological evolution first puts AI back in the context of the discipline The author then presents a collection of AI s applications in Architecture The book finally gives the stage to contributors working at the forefront of this revolution From Harvard to Foster Partners their perspectives provide a panorama of the discourse surrounding AI s presence in the field Halfway between research and practice this book offers to unveil the promise and challenges AI holds for Architecture Artificial intelligence as a planning tool for architects From urban planning to floor plans Potential of a new way of working *Architectural Intelligence* Philip F. Yuan, Mike Xie, Neil Leach, Jiawei Yao, Xiang Wang, 2020-09-03 This book presents selected papers from The 1st International Conference on Computational Design and Robotic Fabrication CDRF 2019 Focusing on novel architecture theories tools methods and procedures for digital design and construction in architecture it promotes dialogs between architecture engineer computer science robotics and other relevant disciplines to establish a new way of production in the building industry in the digital age The contents make valuable contributions to academic researchers and engineers in the industry At the same time it offers readers new ideas for the application of digital technology *The Routledge Companion to Artificial Intelligence in Architecture* Imdat As, Prithwish Basu, 2021-05-05 Providing the most comprehensive source available this book surveys the state of the art in artificial intelligence AI as it relates to architecture This book is organized in four parts theoretical foundations tools and techniques AI in research and AI in architectural practice It provides a framework for the issues surrounding AI and offers a variety of perspectives It contains 24 consistently illustrated contributions examining seminal work on AI from around the world including the United States Europe and Asia It articulates current theoretical and practical methods offers critical views on tools and techniques and suggests future directions for meaningful uses of AI technology Architects and educators who are concerned with the advent of AI and its ramifications for the design industry will find this book an essential reference **Artificial Cognition Architectures** James Crowder, John N. Carbone, Shelli Friess, 2013-08-13 The goal of this book is to establish the foundation

principles theory and concepts that are the backbone of real autonomous Artificial Intelligence Presented here are some basic human intelligence concepts framed for Artificial Intelligence systems These include concepts like Metacognition and Metamemory along with architectural constructs for Artificial Intelligence versions of human brain functions like the prefrontal cortex Also presented are possible hardware and software architectures that lend themselves to learning reasoning and self evolution

Architectural Intelligence Molly Wright Steenson,2022-11-01 Architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity In Architectural Intelligence Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work Christopher Alexander Richard Saul Wurman Cedric Price and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day Alexander long before his famous 1977 book A Pattern Language used computation and structure to visualize design problems Wurman popularized the notion of information architecture Price designed some of the first intelligent buildings and Negroponte experimented with the ways people experience artificial intelligence even at architectural scale Steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology What did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems And what was this new space that emerged within these collaborations At times Steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture The projects Steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments Alexander Wurman Price and Negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities

Multi-Computer Architectures for Artificial Intelligence Leonard Uhr,1987-02-20 This volume is the most current and complete evaluation of multi computer networks It presents an up to date and detailed survey which describes the large number of multi computer architectures that have been built during the past few years and the even greater variety that are presently being built designed and explored Special emphasis is given to approaches that show promise for handling complex real world problems in real time Describes the range of problems that confront workers in artificial intelligence AI and explains some of the major approaches being taken by AI researchers focusing on the robust flexible extremely fast hence highly parallel systems Presents judgements and opinions as to the most promising multi computer architectures for AI including a number of exciting multi computer structures

Architectural Intelligence in the Age of Artificial Intelligence Andri Gerber,Oya Atalay Franck,Michael Mieskes,2025-09-19 How will AI transform architecture How can we conceptualize AI in the context of architecture The contributors to this volume discuss different positions to understand the fundamental shift

provoked by AI and contextualize this shift in forms of operational theories and performative uses of the medium The volume includes essays by practicing architects who explain how AI is used in their work by philosophers who reflect on the impact of AI on our way of thinking and conceptualizing the world and by scientists who explain the foundations and the potential of AI for architecture It provides the starting point to engaging with AI in architecture

Advances in Artificial General Intelligence Ben Goertzel, Pei Wang, 2007 The topic of this book the creation of software programs displaying broad deep human style general intelligence is a grand and ambitious one And yet it is far from a frivolous one what the papers in this publication illustrate is that it is a fit and proper subject for serious science and engineering exploration No one has yet created a software program with human style or even roughly human level general intelligence but we now have a sufficiently rich intellectual toolkit that it is possible to think about such a possibility in detail and make serious attempts at design analysis and engineering possibility in detail and make serious attempts at design analysis and engineering This is the situation that led to the organization of the 2006 AGIRI Artificial General Intelligence Research Institute workshop and to the decision to publish a book from contributions by the speakers at the conference The material presented here only scratches the surface of the AGI related R D work that is occurring around the world at this moment But the editors are pleased to have had the chance to be involved in organizing and presenting at least a small percentage of the contemporary progress

Machine Learning Phil Bernstein, 2025-09-01 The advent of machine learning based AI systems demands that our industry does not just share toys but builds a new sandbox in which to play with them Phil Bernstein The profession is changing A new era is rapidly approaching when computers will not merely be instruments for data creation manipulation and management but empowered by artificial intelligence they will become agents of design themselves Architects need a strategy for facing the opportunities and threats of these emergent capabilities or risk being left behind Architecture s best known technologist Phil Bernstein provides that strategy Divided into three key sections Process Relationships and Results Machine Learning lays out an approach for anticipating understanding and managing a world in which computers often augment but may well also supplant knowledge workers like architects Armed with this insight practices can take full advantage of the new technologies to future proof their business Features chapters on Professionalism Tools and technologies Laws policy and risk Delivery means and methods Creating consuming and curating data Value propositions and business models

Diffusions in Architecture: Artificial Intelligence and Image Generators Matias del Campo, 2024-02-07 DIFFUSIONS IN ARCHITECTURE A guide to diffusion models and their impact on design with insight on how this novel artificial intelligence technology may disrupt the industry Diffusions in Architecture Artificial Intelligence and Image Generators delves into the impact of Generative AI models and their effect on architecture design and aesthetics The book presents an in depth analysis of how these new technologies are revolutionizing the field of architecture and changing the way architects approach their work The architects presented in the book focus on the application of specific AI

techniques and tools used in generative design such as Diffusion models Dall E2 Stable Diffusion and MidJourney It discusses how these techniques can generate synthetic images that are both realistic and imaginative creating new possibilities for architectural design and aesthetics Twenty two leading designers and theorists offer their insights providing disciplinary depth by covering the full impact of these learning tools on architecture Proceedings of the ...
