Architectures And Mechanisms For Language Processing:

Architectures and Mechanisms for Language Processing Matthew W. Crocker, Martin Pickering, Charles Clifton, 2006-11-02 The architectures and mechanisms underlying language processing form one important part of the general structure of cognition This book written by leading experts in the field brings together linguistic psychological and computational perspectives on some of the fundamental issues Several general introductory chapters offer overviews on important psycholinguistic research frameworks and highlight both shared assumptions and controversial issues Subsequent chapters explore syntactic and lexical mechanisms the interaction of syntax and semantics in language understanding and the implications for cognitive architecture **AMLaP - 2005**, 2005 The Soar Cognitive Architecture John E. Laird, 2019-08-20 The definitive presentation of Soar one AI s most enduring architectures offering comprehensive descriptions of fundamental aspects and new components In development for thirty years Soar is a general cognitive architecture that integrates knowledge intensive reasoning reactive execution hierarchical reasoning planning and learning from experience with the goal of creating a general computational system that has the same cognitive abilities as humans In contrast most AI systems are designed to solve only one type of problem such as playing chess searching the Internet or scheduling aircraft departures Soar is both a software system for agent development and a theory of what computational structures are necessary to support human level agents Over the years both software system and theory have evolved This book offers the definitive presentation of Soar from theoretical and practical perspectives providing comprehensive descriptions of fundamental aspects and new components The current version of Soar features major extensions adding reinforcement learning semantic memory episodic memory mental imagery and an appraisal based model of emotion This book describes details of Soar s component memories and processes and offers demonstrations of individual components components working in combination and real world applications Beyond these functional considerations the book also proposes requirements for general cognitive architectures and explicitly evaluates how well Soar meets those requirements **Annual Workshop on Formal Approaches to Slavic Linguistics**, 2005 **Encoding and Navigating Linguistic Representations in Memory** Claudia Felser, Colin Phillips, Matthew Wagers, 2017-03-22 Successful speaking and understanding requires mechanisms for reliably encoding structured linguistic representations in memory and for effectively accessing information in those representations later Studying the time course of real time linguistic dependency formation provides a valuable tool for uncovering the cognitive and neural basis of these mechanisms This volume draws together multiple perspectives on encoding and navigating structured linguistic representations to highlight important empirical insights and to identify key priorities for new research in this area **AMLaP-96 Conference**, 1996* The Harmonic Mind: Linguistic and philosophical implications Paul Smolensky, Géraldine Legendre, 2006 An integrated connectionist symbolic architecture of the mind brain applied to neural genomic realization of grammar acquisition processing and

Subsymbolic Natural Language Processing Risto Miikkulainen, 1993 Risto Miikkulainen draws on recent connectionist work in language comprehension to create a model that can understand natural language Using the DISCERN system as an example he describes a general approach to building high level cognitive models from distributed neural networks and shows how the special properties of such networks are useful in modeling human performance In this approach connectionist networks are not only plausible models of isolated cognitive phenomena but also sufficient constituents for complete artificial intelligence systems Distributed neural networks have been very successful in modeling isolated cognitive phenomena but complex high level behavior has been tractable only with symbolic artificial intelligence techniques Aiming to bridge this gap Miikkulainen describes DISCERN a complete natural language processing system implemented entirely at the subsymbolic level In DISCERN distributed neural network models of parsing generating reasoning lexical processing and episodic memory are integrated into a single system that learns to read paraphrase and answer questions about stereotypical narratives Miikkulainen's work which includes a comprehensive survey of the connectionist literature related to natural language processing will prove especially valuable to researchers interested in practical techniques for high level representation inferring memory modeling and modular connectionist architectures Risto Miikkulainen is an Assistant Professor in the Department of Computer Sciences at The University of Texas at Austin

Computational Linguistics, 2000 The Handbook of Computational Linguistics and Natural Language Processing Alexander Clark, Chris Fox, Shalom Lappin, 2013-04-24 This comprehensive reference work provides an overview of the concepts methodologies and applications in computational linguistics and natural language processing NLP Features contributions by the top researchers in the field reflecting the work that is driving the discipline forward Includes an introduction to the major theoretical issues in these fields as well as the central engineering applications that the work has produced Presents the major developments in an accessible way explaining the close connection between scientific understanding of the computational properties of natural language and the creation of effective language technologies Serves as an invaluable state of the art reference source for computational linguists and software engineers developing NLP applications in industrial research and development labs of software companies
