Good Reasons for Better Arguments Jerome E. Bickenbach, Jacqueline M. Davies, 1996-09-19 This text introduces university students to the philosophical ethos of critical thinking as well as to the essential skills required to practice it The authors believe that Critical Thinking should engage students with issues of broader philosophical interest while they develop their skills in reasoning and argumentation The text is informed throughout by philosophical theory concerning argument and communication from Aristotle s recognition of the importance of evaluating argument in terms of its purpose to Habermas s developing of the concept of communicative rationality The authors treatment of the topic is also sensitive to the importance of language and of situation in shaping arguments and to the necessity in argument of some interplay between reason and emotion Unlike many other texts in this area then *Good Reasons for Better Arguments* helps to explain both why argument is important and how the social role of argument plays an important part in determining what counts as a good argument If this text is distinctive in the extent to which it deals with the theory and the values of critical thinking it is also noteworthy for the thorough grounding it provides in the skills of deductive and inductive reasoning the authors present the reader with useful tools for the interpretation evaluation and construction of arguments A particular feature is the inclusion of a wide range of exercises rich with examples that illuminate the practice of argument for the student Many of the exercises are self testing with answers provided at the back of the text others are appropriate for in class discussion and assignments Challenging yet accessible *Good Reasons for Better Arguments* brings a fresh perspective to an essential subject

Evaluating the Language of Argument Martin Hinton, 2020-11-30 This book is concerned with the evaluation of natural

argumentative discourse and in particular with the language in which arguments are expressed It introduces a systematic procedure for the analysis and assessment of arguments which is designed to be a practical tool and may be considered a pseudo algorithm for argument evaluation The first half of the book lays the theoretical groundwork with a thorough examination of both the nature of language and the nature of argument This leads to a definition of argumentation as reasoning expressed within a procedure which itself yields the three frames of analysis used in the evaluation procedure Process Reasoning and Expression The second half begins with a detailed discussion of the concept of fallacy with particular attention on fallacies of language their origin and their effects A new way of looking at fallacies emerges from these chapters and it is that conception together with the understanding of the nature of argumentation described in earlier sections which ultimately provides the support for the Comprehensive Assessment Procedure for Natural Argumentation The first two levels of this innovative procedure are outlined while the third that dealing with language and involving the development of an Informal Argument Semantics is fully described The use of the system and its power of analysis are illustrated through the evaluation of a variety of examples of argumentative texts
