These phenomena include deep convection over the Indo Pacific warm pool and its planetary scale organization the Madden Julian Oscillation the monsoons the El Niño Southern Oscillation the Pacific Decadal Oscillation and the low frequency variability of extratropical circulations. The volume also has a chapter focusing on the discussion of the causes of the recent melting of Arctic sea ice and a chapter devoted to the discussion of the causes of recent changes in the frequency and intensity of tropical cyclones. On each topic the basic material of climate dynamics is covered to aid the understanding of the forefront research making the volume accessible to a broad spectrum of readers. The volume highlights include Diabatic and nonlinear aspects of the El Niño Southern Oscillation Causes of sea ice melting in the Arctic Impact of global warming on tropical cyclone activity Origins of the Pacific Decadal Oscillation Causes of climate variability of Asian monsoons. The volume will be of particular interest to graduate students and young researchers in atmospheric and oceanic sciences and related disciplines such as geology and geography. The Climate of China Manfred Domrös, Gongbing Peng, 2012-12-06 Since the founding of the People's Republic of China in 1949 there has been a rapid advance in climatology in China. The number of climatological stations has increased from less than 100 to more than 2000 and the research work fields. The climate of China is no longer just a description of the average weather for an area or locality but covers many fields such as the monsoon climate the fluctuation of climate the spatial and temporal variations of the climatic elements and physical and dynamic climate. Four books on the climate of China written in Chinese have been published so far. There is however no excellent book written in English on the climate of China although Volume 8 of the *World Survey of Climatology* dealing with the climates of northern and eastern Asia edited by H. Arakawa in 1969 contains a chapter on the climate of China and Korea written by L. E. M. Watts. The data sources for China are based mainly on observations from 1940-1952 and the climatological charts of China published by the Central Weather Bureau of China in 1953 and 1955. This monograph on *The Climate of China* by Prof. Dr. M. Domrös and Prof. Peng Gongbing is the first comprehensive and advanced book in English on the climate of China.

The book details the institutional

Teachers' Monographs , 1907 **The Climate of the Arctic** Rajmund Przybylak, 2003-03-31 th Towards the end of the 19 century some researchers put forward the hypothesis that the Polar regions may play the key role in the shaping of the global climate This supposition found its full confirmation in empirical and th model research conducted in the 20 century particularly in recent decades The intensification of the global warming after about 1975 brought into focus the physical causes of this phenomenon The first climatic models created at that time and the analyses of long observation series consistently showed that the Polar regions are the most sensitive to climatic changes This aroused the interest of numerous researchers who thought that the examination of the processes taking place in these regions might help to determine the mechanisms responsible for the working of the global climatic system To date a great number of publications on this issue

have been published However as a re view of the literature shows there is not a single monograph which comprises the basic information concerning the current state of the Arctic climate The last study to discuss the climate of the Arctic in any depth was published in 1970 Climates a the Polar Regions vol 14 ed S Orvig by the World Survey of Climatology edited by H E Landsberg This publication however does not provide the full climatic picture of many meteorological elements Solar Variability and Climate Change Judit M.
