

Embryonic Stage

All cells eventually differentiate into one of the three germ layers: ectoderm (the outermost), mesoderm (the middle), and endoderm (the innermost). The ectoderm gives rise to the skin, hair, and the nervous system. The mesoderm gives rise to the muscles, bones, and the circulatory system. The endoderm gives rise to the digestive tract and the respiratory system.

Developing Heart:

The Developing Heart Marianne J. Legato, 2012-12-06 Heart disease despite recent improvements continues to be the single most important cause of death and disability in the United States. It is estimated that the direct cost of medical care for cardiovascular disease is 6 billion dollars per year. Data compiled by the National Center for Health Statistics reveal a dramatic decline in deaths from cardiovascular disease in the United States greater than 20% since 1968. This phenomenon has been the subject of in-depth study. It is clear that the decline is real and not a statistical artifact. The decrease in mortality has been noted in all sections of the country though the onset and rate of decline varies in different regions of the country. Both primary prevention through changes in risk factors and basic and applied research leading to earlier recognition and improved treatment have contributed to the decline. They do not fully explain the decline. Further research is needed to clarify this issue. Clinical cardiologists have been exposed to a veritable explosion of new knowledge of mechanisms of cardiovascular disease development of new improved non-invasive diagnostic techniques and the pharmacodynamics of agents affecting the cardiovascular system. This new knowledge results from contributions made by individuals from diverse disciplines including cellular and molecular biologists, geneticists, hematologists, cardiologists, and cardiovascular surgeons.

The ESC Textbook of Cardiovascular Development José M. Pérez-Pomares, Robert Kelly, 2018-07-12 This highly illustrated textbook has been prepared by the Working Group on Development Anatomy and Pathology of the European Society of Cardiology (ESC). The ESC Textbook of Cardiovascular Development is the authority on cardiovascular development from a perspective of both basic scientists and clinicians. The embryonic origin of congenital heart diseases and their pathology has been analysed in depth. Modern concepts pivotal to the understanding of cardiovascular morphogenesis, including those still subject to controversy, have been highlighted and the content covers the ESC Core Curriculum. The textbook will appeal to researchers and clinicians from a wide spectrum of disciplines including molecular and developmental biologists working on mechanisms of heart development in a range of model organisms as well as pathologists, morphologists, geneticists, and cardiologists.

Mouse Development Janet Rossant, Patrick T. Tam, 2002-03-21 This book represents a classic compilation of current knowledge about mouse development and its correlates to research in cell biology, molecular biology, genetics, and neuroscience. Emphasis is placed on the research strategy, experimental design, and critical analysis of the data, distinguishing this from other books that only focus on protocols for mouse developmental research. Selected chapters are indexed to electronic databases such as GeneBank, GenBank, Electronic Mouse Atlas, and Transgenic Knockout, further increasing the utility of this book as a reference. Broad-based overview of mouse development from fundamental to specialist levels. Extensive coverage of a wide range of developmental mutations of the mouse. Excellent benchmark illustrations of brain, craniofacial, gut, and heart development. In-depth, experiment-based assessment of concepts in mammalian development. Focus on models of specific relevance to human development. Comprehensive reference to key literature and electronic databases.
