Craft Of Programming:

Coders at Work Peter Seibel, 2009-12-21 Peter Seibel interviews 15 of the most interesting computer programmers alive today in *Coders at Work* offering a companion volume to Apress's highly acclaimed best seller *Founders at Work* by Jessica Livingston. As the words at work suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming while revealing much more like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the *Coders at Work* web site www.codersatwork.com. The complete list was 284 names. Having digested everyone's feedback, we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen, Pioneer in optimizing compilers, first woman to win the Turing Award 2006 and first female IBM fellow; Joe Armstrong, Inventor of Erlang; Joshua Bloch, Author of the Java collections framework, now at Google; Bernie Cosell, One of the main software guys behind the original ARPANET IMPs and a master debugger; Douglas Crockford, JSON founder, JavaScript architect at Yahoo; L. Peter Deutsch, Author of Ghostscript, implementer of Smalltalk 80 at Xerox PARC and Lisp 1.5 on PDP-1; Brendan Eich, Inventor of JavaScript, CTO of the Mozilla Corporation; Brad Fitzpatrick, Writer of LiveJournal, OpenID, memcached, and Perlbal; Dan Ingalls, Smalltalk implementor and designer; Simon Peyton Jones, Coinventor of Haskell and lead designer of Glasgow Haskell Compiler; Donald Knuth, Author of *The Art of Computer Programming* and creator of TeX; Peter Norvig, Director of Research at Google and author of the standard text on AI; Guy Steele, Coinventor of Scheme and part of the Common Lisp Gang of Five, currently working on Fortress; Ken Thompson, Inventor of UNIX; Jamie Zawinski, Author of XEmacs and early Netscape/Mozilla hacker.

The Programmer's Craft Richard J. Weiland,1983 In shaping the current version of this book a number of goals were set The first was that the book be independent of any particular computer or programming language but be compatible with them all This book will be useful in any computer environment The second was that it correspond well to a generally agreed on portion of the Computer Science curriculum The book is aimed toward the material recommended by the Association for Computing Machinery for a second course in Computer Science The third and by far the easiest as it turned out was to make the book both substantive and entertaining

The Art and Craft of Computing Stefano Ceri,Dino Mandrioli,Licia Sbattella,1998 Gives students a firm rooting in the fundamental principles of computer science and an appreciation of the correlation between those principles and an introduction to programming Maintains strong coverage of the topics taught in the traditional introductory courses including algorithms and basic elements of programming languages and then goes further to introduce higher level topics such as the structures of operating systems databases and productivity tools
