Audiovisual Guide to the Catalog of the Food and Nutrition Information and Educational Materials Center Food and Nutrition Information and Educational Materials Center (U.S.), 1975 *An Investment Framework for Nutrition* Meera Shekar, Jakub Kakietek, Julia Dayton Eberwein, Dylan Walters, 2017-04-24 An Investment Framework for Nutrition Reaching the Global Targets for Stunting Anemia Breastfeeding and Wasting estimates the costs impacts and financing scenarios to achieve the World Health Assembly global nutrition targets for stunting anemia in women exclusive breastfeeding and the scaling up of the treatment of severe wasting among young children To reach these four targets the world needs US 70 billion over 10 years to invest in high impact nutrition specific interventions This investment would have enormous benefits 65 million cases of stunting and 265 million cases of anemia in women would be prevented in 2025 as compared with the 2015 baseline In addition at least 91 million more children would be treated for severe wasting and 105 million additional babies would be exclusively breastfed during the first six months of life over 10 years Altogether achieving

these targets would avert at least 3.7 million child deaths. Every dollar invested in this package of interventions would yield between US\$4 and US\$35 in economic returns, making investing in early nutrition one of the best value for money development actions. Although some of the targets, especially those for reducing stunting in children and anemia in women, are ambitious and will require concerted efforts in financing, scale up, and sustained commitment, recent experience from several countries suggests that meeting these targets is feasible. These investments in the critical 1000-day window of early childhood are inalienable and portable and will pay lifelong dividends, not only for children directly affected but also for us all in the form of more robust societies that will drive future economies.

Basic Nutrition and Diet Therapy Corinne Hogden Robinson, 1975. *Food for All* Uma Lele, Manmohan Agarwal, Brian C. Baldwin, Sambuddha Goswami, 2021-10-15. Many developing countries are falling behind sustainable development goals; food and nutrition levels have deteriorated due to conflict, climate change, and the COVID pandemic, while global ambitions for achieving sustainable food security and adequate nutrition have increased. But what are the prospects of achieving sustainable healthy food for all? What is the best response to concerns about growing differentiation among developing countries in terms of domestic agricultural and industrial performance? How have global institutions established during the post-World War Two period helped developing countries to deal with the past economic fallout of food fuel and financial crises? *Food for All* explores how developments since these organizations were established have led to changes in the provision of international financial and technical assistance in support of the global food and agriculture system and how developing countries' own efforts have helped transform them. These developments and the increase in the number of global actors have expanded and complicated global governance, presenting both opportunities for as well as challenges to the improvement of food systems. This volume provides an analysis of the structure, coordination, and management of the Food and Agriculture Organization of the United Nations (FAO), the International Fund for Agricultural Development (IFAD), and the World Food Programme (WFP). It also looks at the World Bank, the largest international funder of policy advice and investment projects, and CGIAR, a leading funder of international agricultural research. This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations.
