Basic Structures Of Function Field Arithmetic:

Basic Structures of Function Field Arithmetic David Goss,1997-11-18 From the reviews The book is a thorough and very readable introduction to the arithmetic of function fields of one variable over a finite field by an author who has made fundamental contributions to the field It serves as a definitive reference volume as well as offering graduate students with a solid understanding of algebraic number theory the opportunity to quickly reach the frontiers of knowledge in an important area of mathematics The arithmetic of function fields is a universe filled with beautiful surprises in which familiar objects from classical number theory reappear in new guises and in which entirely new objects play important roles Goss clear exposition and lively style make this book an excellent introduction to this fascinating field MR 97i 11062 **Function Field Arithmetic** Dinesh S. Thakur,2004 This book provides an exposition of function field arithmetic with emphasis on recent developments concerning Drinfeld modules the arithmetic of special values of transcendental functions such as zeta and gamma functions and their interpolations diophantine approximation and related interesting open problems While it covers many topics treated in Basic Structures of Function Field Arithmetic by David Goss it complements that book with the inclusion of recent developments as well as the treatment of new topics such as diophantine approximation hypergeometric functions modular forms transcendence automata and solitons There is also new work on multizeta values and log algebraicity The author has included numerous worked out examples Many open problems which can serve as good thesis problems are discussed *Function Field Arithmetic* Dinesh S Thakur,2004-06-01 This book provides an exposition of function field arithmetic with emphasis on recent developments concerning Drinfeld modules the arithmetic of special values of transcendental functions such as zeta and gamma functions and their interpolations diophantine approximation and related interesting open problems While it covers many topics treated in Basic Structures of Function Field Arithmetic by David Goss it complements that book with the inclusion of recent developments as well as the treatment of new topics such as diophantine approximation hypergeometric functions modular forms transcendence automata and solitons There is also new work on multizeta values and log algebraicity The author has included numerous worked out examples Many open problems which can serve as good thesis problems are discussed **Basic Structures of Function Field Arithmetic** David Goss,2012-12-06 From the reviews The book is a thorough and very readable introduction to the arithmetic of function fields of one variable over a finite field by an author who has made fundamental contributions to the field It serves as a definitive reference volume as well as offering graduate students with a solid understanding of algebraic number theory the opportunity to quickly reach the frontiers of knowledge in an important area of mathematics The arithmetic of function fields is a universe filled with beautiful surprises in which familiar objects from classical number theory reappear in new guises and in which entirely new objects play important roles Goss clear exposition and lively style make this book an excellent introduction to this fascinating field MR 97i 11062 Arithmetic Geometry over Global Function Fields Gebhard

Böckle,David Burns,David Goss,Dinesh Thakur,Fabien Trihan,Douglas Ulmer,2014-11-13 This volume collects the texts of five courses given in the Arithmetic Geometry Research Programme 2009 2010 at the CRM Barcelona All of them deal with characteristic p global fields the common theme around which they are centered is the arithmetic of L functions and other special functions investigated in various aspects Three courses examine some of the most important recent ideas in the positive characteristic theory discovered by Goss a field in tumultuous development which is seeing a number of spectacular advances they cover respectively crystals over function fields with a number of applications to L functions of t motives gamma and zeta functions in characteristic p and the binomial theorem The other two are focused on topics closer to the classical theory of abelian varieties over number fields they give respectively a thorough introduction to the arithmetic of Jacobians over function fields including the current status of the BSD conjecture and its geometric analogues and the construction of Mordell Weil groups of high rank and a state of the art survey of Geometric Iwasawa Theory explaining the recent proofs of various versions of the Main Conjecture in the commutative and non commutative settings   *Number Fields and Function Fields – Two Parallel Worlds* Gerard B. M. van der Geer,BJJ Moonen,René Schoof,2006-11-24 Ever since the analogy between number fields and function fields was discovered it has been a source of inspiration for new ideas and a long history has not in any way detracted from the appeal of the subject As a deeper understanding of this analogy could have tremendous consequences the search for a unified approach has become a sort of Holy Grail The arrival of Arakelov s new geometry that tries to put the archimedean places on a par with the finite ones gave a new impetus and led to spectacular success in Faltings hands There are numerous further examples where ideas or techniques from the more geometrically oriented world of function fields have led to new insights in the more arithmetically oriented world of number fields or vice versa These invited articles by leading researchers in the field explore various aspects of the parallel worlds of function fields and number fields Topics range from Arakelov geometry the search for a theory of varieties over the field with one element via Eisenstein series to Drinfeld modules and t motives This volume is aimed at a wide audience of graduate students mathematicians and researchers interested in geometry and arithmetic and their connections   **The Arithmetic of Drinfeld Modules** Dragos Florin Ghioca,2005   **Bulletin of the American Mathematical Society** ,2001   *Bulletin of the Belgian Mathematical Society, Simon Stevin* ,2007   *Current Trends in Number Theory* S.D. Adhikari,S. A. Katre,B. Ramakrishnan,2002 The book gives a glimpse of current research in combinatorial algebraic and analytic aspects of number theory The articles are refereed and expanded versions of talks given at the International Conference on Number Theory held at the Harish Chandra Research Institute Allahaba India Included also are some articles on arithmetic algebraic geometry   *Proceedings of the International Conference on Cohomology of Arithmetic Groups, L-Functions, and Automorphic Forms* T. N. Venkataramana,2001 This collection of papers is based on lectures delivered at the Tata Institute of Fundamental Research TIFR as part of a special year on arithmetic groups L functions and automorphic forms The volume opens with an

article by Cogdell and Piatetski Shapiro on Converse Theorems for GL_n and applications to liftings It ends with some remarks on the Riemann Hypothesis by Ram Murty Other talks cover topics such as Hecke theory for Jacobi forms restriction maps and L values congruences for Hilbert modular forms Whittaker models for p adic GL 4 the Seigel formula newforms for the Maass Spezialchar an algebraic Chebotarev density theorem a converse theorem for Dirichlet series with poles Kirillov theory for GL_2 mathcal D and the L 2 Euler characteristic of arithmetic quotients The present volume is the latest in the Tata Institute s tradition of recognized contributions to number theory **Demonstratio mathematica** ,1997 **Journal Für Die Reine und Angewandte Mathematik** August Leopold Crelle,Carl Wilhelm Borchardt,Leopold Kronecker,Lazarus Fuchs,Kurt Hensel,Helmut Hasse,Friedrich Schottky,2004 **Acta Arithmetica** ,2013 *Invitation to Higher Local Fields* Ivan B. P-Adic Mathematical Physics Zoran Rakic,Igor V. Volovich,2006-04-06 The subject of this conference was recent developments in p adic mathematical physics and related areas The field of p Adic mathematical physics was conceived in 1987 as a result of attempts to find non Archimedean approaches to space time at the Planck scale as well as to strings Since then many applications of p adic numbers and adeles in physics and related sciences have emerged Some of them are p adic and adelic string theory p adic and adelic quantum mechanics and quantum field theory ultrametricity of spin glasses biological and hierarchical systems p adic dynamical systems p adic probability theory p adic models of cognitive processes and cryptography as well as p adic and adelic cosmology *Proceedings of the American Mathematical Society* American Mathematical Society,2001 Contains the material formerly published in even numbered issues of the Bulletin of the American Mathematical Society *Compositio Mathematica* ,2008 Thorn Forking in Simple Theories and a Manin-Mumford Theorem for T-modules Clifton F.
