Systematic Introduction to Expert Systems Frank Puppe, 2012-12-06 At present one of the main obstacles to a broader application of expert systems is the lack of a theory to tell us which problem solving methods are available for a given problem class. Such a theory could lead to significant progress in the following central aims of the expert system technique: Evaluating the technical feasibility of expert system projects. This depends on whether there is a suitable problem solving method and if possible a corresponding tool for the given problem class. Simplifying knowledge acquisition and maintenance. The problem solving methods provide direct assistance as interpretation models in knowledge acquisition. Also they make possible the development of problem specific expert system tools with graphical knowledge acquisition components which can be used even by experts without programming experience. Making use of expert systems as a knowledge medium. The structured knowledge in expert systems can be used not only for problem solving but also for knowledge communication and tutorial purposes. With such a theory in mind this book provides a systematic introduction to expert systems. It describes the basic knowledge representations and the present situation with regard to the identification, realization and integration of problem solving methods for the main problem classes of expert systems: classification, diagnostics, construction and simulation.

Using DBase IV Mark Brownstein, 1989 Designed to be a clear, easy to use guide to DBase IV, the newest version of DBase. Later chapters deal with designing query structures, generating printed reports and other more advanced features. Import/export facilities are explained, enabling the user to bring data files in from such programs as Lotus 1-2-3, PFS Professional File, DBase I and II and other programs. This guide is comprehensive enough to be used without documentation.
