Algebraic Engineering - Proceedings Of The First International Conference On Semigroups And Algebraic Eng And Workshop On For Chrystopher L Nehaniv, Masami Ito, 1999-05-14 There is algebraic structure in time computation and biological systems Algebraic engineering exploits this structure to achieve better understanding and design In this book pure and applied results in semigroups language theory and algebra are applied to areas ranging from circuit design to software engineering to biological evolution

Algebra, Meaning, and Computation Kokichi Futatsugi, Jean-Pierre Jouannaud, José Meseguer, 2006-06-21 This volume honoring the computer science pioneer Joseph Goguen on his 65th Birthday includes 32 refereed papers by leading researchers in areas spanned by Goguen s work The papers address a variety of topics from meaning meta logic specification and composition behavior and formal languages as well as models deduction and computation by key members of the research community in computer science and other fields connected with Joseph Goguen s work

Algebraic and Logic Programming, 1997 Multi-Agent Systems and Applications Michael Luck, 2001-06-20 This book presents selected tutorial lectures given at the summer school on Multi Agent Systems and Their Applications held in Prague Czech Republic in July 2001 under the sponsorship of ECCAI and Agent Link The 20 lectures by leading researchers in the field presented in the book give a competent state of the art account of research and development in the field of multi agent systems and advanced applications The book offers parts on foundations of MAS social behaviour meta reasoning and learning and applications

Algebraic and Logic Programming Hélène Kirchner, Giorgio Levi, 1992 This volume contains the proceedings of the Third International Conference on Algebraic and Logic Programming held in Pisa Italy September 2 4 1992 Like the two previous conferences in Germany in 1988 and France in 1990 the third conference aims at strengthening the connections between algebraic techniques and logic programming On the one hand logic programming has been very successful during the last decades and more and more systems compete in enhancing its expressive power On the other hand concepts like functions equality theory and modularity are particularly well handled in an algebraic framework Common foundations of both approaches have recently been developed and this conference is a forum for people from both areas to exchange ideas results and experiences The book covers the following topics semantics of algebraic and logic programming integration of functional and logic programming term rewriting narrowing and resolution constraint logic programming and theorem proving concurrent features in algebraic and logic programming languages and implementation issues PUBLISHER S WEBSITE

Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Shojiro Sakata, 1991-07-10 The AA/ECC conferences focus on the algebraic aspects of modern computer science which include the most up to date and advanced topics The topic of error correcting codes is one where theory and implementation are unified into a subject both of mathematical beauty and of practical importance Algebraic algorithms are not only interesting theoretically but also important in computer and communication engineering and many other fields This volume

contains the proceedings of the 8th AAEEC conference held in Tokyo in August 1990 Researchers from Europe America Japan and other regions of the world presented papers at the conference The papers present new results of recent theoretical and application oriented research on applied algebra algebraic algorithms and error correcting codes

Mathematical Aspects of Artificial Intelligence Frederick Hoffman, American Mathematical Society, 1998 There exists a history of great expectations and large investments involving artificial intelligence AI There are also notable shortfalls and memorable disappointments One major controversy regarding AI is just how mathematical a field it is or should be This text includes contributions that examine the connections between AI and mathematics demonstrating the potential for mathematical applications and exposing some of the more mathematical areas within AI The goal is to stimulate interest in people who can contribute to the field or use its results Included in the work by M Newborn on the famous Deep Blue chess match He discusses highly mathematical techniques involving graph theory combinatorics and probability and statistics G Shafer offers his development of probability through probability trees with some of the results appearing here for the first time M Golumbic treats temporal reasoning with ties to the famous Frame Problem His contribution involves logic combinatorics and graph theory and leads to two chapters with logical themes H Kirchner explains how ordering techniques in automated reasoning systems make deduction more efficient Constraint logic programming is discussed by C Lassez who shows its intimate ties to linear programming with crucial theorems going back to Fourier V Nalwa's work provides a brief tour of computer vision tying it to mathematics from combinatorics probability and geometry to partial differential equations All authors are gifted expositors and are current contributors to the field The wide scope of the volume includes research problems research tools and good motivational material for teaching

Next Generation Information System Technology Joachim W. Schmidt, 1991-06-26 Currently the field of information systems technology is rapidly extending into several dimensions There is the semantic dimension including object orientation data deduction and extended knowledge representation schemes there is improved systems integration and there are new tools All these extensions aim to provide semantically richer and better engineered information systems that allow for more adequate and complete representations and thus extend the effective use of database technology to a wider class of applications Database researchers and developers whether they are committed to application or to system construction are convinced that next generation information system technology will be heavily determined by a handful of new concepts that they have to understand and work out in detail now This volume concentrates on the following topics Extended data types and data models database

programming languages Rule based data deduction expert systems knowledge bases Object orientation and semantic data modelling DB application development methodologies and tools Interface technology parallelism interoperability New database applications

Attribute Grammars, Applications and Systems H. Alblar, Břivoj Melichar, 1991 Attribute grammars have shown themselves to be a useful formalism for specifying the syntax and the static semantics of programming languages They are also useful for implementing syntax directed editors compilers translator writing systems and compiler generators and any application that has a strong syntactic base However no textbooks are available that cover the entire field To redress this imbalance an International Summer School on Attribute Grammars Applications and Systems was held in Prague Czechoslovakia in June 1991 The course aimed at teaching the state of the art in attribute grammars and their relation to other language specification methods This volume presents the proceedings of the school The papers are well suited for self study and a selection of them can be used for introductory courses in attribute grammars PUBLISHER S WEBSITE
