Antonio Campillo,1980 **Algebroid Curves in Positive Characteristic** ,1980 **Singularities, Algebraic Geometry, Commutative Algebra, and Related Topics** Gert-Martin Greuel,Luis Narváez Macarro,Sebastià

Xambó-Descamps,2018-09-18 This volume brings together recent original research and survey articles by leading experts in several fields that include singularity theory algebraic geometry and commutative algebra The motivation for this collection comes from the wide ranging research of the distinguished mathematician Antonio Campillo in these and related fields Besides his influence in the mathematical community stemming from his research Campillo has also endeavored to promote mathematics and mathematicians networking everywhere especially in Spain Latin America and Europe Because of his impressive achievements throughout his career we dedicate this book to Campillo in honor of his 65th birthday Researchers and students from the world wide and in particular Latin American and European communities in singularities algebraic geometry commutative algebra coding theory and other fields covered in the volume will have interest in this book

Resolution of Curve and Surface Singularities in Characteristic Zero K. Kiyek,José Luis Vicente Córdoba,2004-10 This book covers the beautiful theory of resolutions of surface singularities in characteristic zero The primary goal is to present in detail and for the first time in one volume two proofs for the existence of such resolutions One construction was introduced by H W E Jung and another is due to O Zariski Jung s approach uses quasi ordinary singularities and an explicit study of specific surfaces in affine three space In particular a new proof of the Jung Abhyankar theorem is given via ramification theory Zariski s method as presented involves repeated normalisation and blowing up points It also uses the uniformization of zero dimensional valuations of function fields in two variables for which a complete proof is given Despite the intention to serve graduate students and researchers of Commutative Algebra and Algebraic Geometry a basic knowledge on these topics is necessary only This is obtained by a thorough introduction of the needed algebraic tools in the two appendices

Algebraic Geometry and Singularities Antonio Campillo Lopez,Luis Narvaez Macarro,2012-12-06 The focus of this volume lies on singularity theory in algebraic geometry It includes papers documenting recent and original developments and methods in subjects such as resolution of singularities D module theory singularities of maps and geometry of curves The papers originate from the Third International Conference on Algebraic Geometry held in La Rbida Spain in December 1991 Since then the articles have undergone a meticulous process of refereeing and improvement and they have been organized into a comprehensive account of the state of the art in this field **Introduction to Singularities and Deformations**

Gert-Martin Greuel,Christoph Lossen,Eugenii Shustin,2025 Zusammenfassung In the second edition we do not only correct errors update references and improve some of the proofs of the text of the first edition but also add a new chapter on singularities in arbitrary characteristic We give an overview of several aspects of singularities of algebraic varieties and

formal power series defined over a field of arbitrary characteristic algebraically closed or not Almost all of the results presented here appeared after the publication of the first edition and some results are new In particular we treat in arbitrary characteristic the classical invariants of hypersurface singularities and we review results on the equisingularity of plane curve singularities on the classification of parametrizations of plane branches and on hypersurface and complete intersection singularities with small moduli Moreover we discuss and prove determinacy and semicontinuity results of families of ideals and matrices of power series parametrized by an arbitrary Noether base scheme which are used to prove open loci properties for several singularity invariants The semicontinuity has surprising applications in the computation of local standard bases of zero dimensional ideals which are by magnitudes faster than previously known methods The chapter contains two appendices One is by Dmitry Kerner on large submodules within group orbits which relates to determinacy criteria for singularities in very general contexts It is focused on methods applicable to a broad class of fields of arbitrary characteristic while before the theory was mainly restricted to zero characteristic The second appendix is by Ilya Tyomkin and deals with the geometry of Severi varieties mainly on toric varieties It discusses the breakthrough solution to the problem on the irreducibility of Severi varieties of the plane in arbitrary characteristic with a focus on the characteristic free approach based on tropical geometry We try to be self contained and give proofs whenever possible However due to the amount of material this is not always possible and we then give precise references to the original sources

Singularities, Part 1 Peter Orlik, American Mathematical Society, 1983 On April 7 10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana This title presents the written versions of this Symposium It contains two papers by invited speakers who were not able to attend S S Chern and L Nirenberg

expository papers is the outgrowth of a conference in combinatorics and invariant theory In recent years newly developed techniques from algebraic geometry and combinatorics have been applied with great success to some of the outstanding problems of invariant theory moving it back to the forefront of mathematical research once again This collection of papers centers on constructive aspects of invariant theory and opens with an introduction to the subject by F Grosshans Its purpose is to make the current research more accessible to mathematicians in related fields
