Algebraic Geometry 2:

Basic Algebraic Geometry 2 Igor R. Shafarevich, 2012-11-27 The second volume of Shafarevich's introductory book on algebraic varieties and complex manifolds. As with Volume 1, the author has revised the text and added new material, e.g. a section on real algebraic curves. Although the material is more advanced than in Volume 1, the algebraic apparatus is kept to a minimum, making the book accessible to non-specialists. It can be read independently of Volume 1 and is suitable for beginning graduate students in mathematics as well as those in theoretical physics.

Basic Algebraic Geometry 2 Igor R. Shafarevich, 2013-08-31 Shafarevich's *Basic Algebraic Geometry* has been a classic and universally used introduction to the subject since its first appearance over 40 years ago. As the translator writes in a prefatory note: "For all advanced undergraduate and beginning graduate students and for the many specialists in other branches of math who need a liberal education in algebraic geometry, Shafarevich's book is a must." The second volume is in two parts. Book II is a gentle cultural introduction to scheme theory with the first aim of putting abstract algebraic varieties on a firm foundation; a second aim is to introduce Hilbert schemes and moduli spaces that serve as parameter spaces for other geometric constructions. Book III discusses complex manifolds and their relation with algebraic varieties, Kähler geometry, and Hodge theory. The final section raises an important problem in uniformising higher-dimensional varieties that has been widely studied as the Shafarevich conjecture. The style of *Basic Algebraic Geometry 2* and its minimal prerequisites make it to a large extent independent of *Basic Algebraic Geometry 1* and accessible to beginning graduate students in mathematics and in theoretical physics.

Basic Algebraic Geometry Igor' R. Šafarevič, 1994 *Algebraic Geometry II: Cohomology of Schemes* Ulrich Görtz, Torsten Wedhorn, 2023-11-22 This book completes the comprehensive introduction to modern algebraic geometry which was started with the introductory volume *Algebraic Geometry I: Schemes*. It begins by discussing in detail the notions of smooth unramified and étale morphisms, including the étale fundamental group. The main part is dedicated to the cohomology of quasi-coherent sheaves. The treatment is based on the formalism of derived categories, which allows an efficient and conceptual treatment of the theory, which is of crucial importance in all areas of algebraic geometry. After the foundations are set up, several more advanced topics are studied, such as numerical intersection theory, an abstract version of the Theorem of Grothendieck–Riemann–Roch, the Theorem on Formal Functions, Grothendieck's algebraization results, and a very general version of Grothendieck duality. The book concludes with chapters on curves and on abelian schemes, which serve to develop the basics of the theory of these two important classes of schemes on an advanced level and at the same time to illustrate the power of the techniques introduced previously. The text contains many exercises that allow the reader to check their comprehension of the text, present further examples, or give an outlook on further results.

Hodge Theory and Complex Algebraic Geometry Claire Voisin, 2003 **Hodge Theory and Complex Algebraic Geometry II: Volume 2** Claire Voisin, 2003-07-03 The 2003 second volume of this account of Kählerian geometry and Hodge theory starts with the topology

of families of algebraic varieties Proofs of the Lefschetz theorem on hyperplane sections the Picard Lefschetz study of Lefschetz pencils and Deligne theorems on the degeneration of the Leray spectral sequence and the global invariant cycles follow The main results of the second part are the generalized Noether Lefschetz theorems the generic triviality of the Abel Jacobi maps and most importantly Nori's connectivity theorem which generalizes the above The last part of the book is devoted to the relationships between Hodge theory and algebraic cycles The book concludes with the example of cycles on abelian varieties where some results of Bloch and Beauville for example are expounded The text is complemented by exercises giving useful results in complex algebraic geometry It will be welcomed by researchers in both algebraic and differential geometry

Lectures on Algebraic Geometry II Günter Harder, 2011-04-21 This second volume introduces the concept of schemes reviews some commutative algebra and introduces projective schemes The finiteness theorem for coherent sheaves is proved here again the techniques of homological algebra and sheaf cohomology are needed In the last two chapters projective curves over an arbitrary ground field are discussed the theory of Jacobians is developed and the existence of the Picard scheme is proved Finally the author gives some outlook into further developments for instance Tate cohomology and states some fundamental theorems

Positivity in algebraic geometry 2 R.K. Lazarsfeld, 2004-08-24 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover edition as Vols 48 and 49 in the series *Ergebnisse der Mathematik und ihrer Grenzgebiete*

Hodge Theory and Complex Algebraic Geometry Voisin, 2014-01-01 The second of two volumes offering a modern account of Kählerian geometry and Hodge theory for researchers in algebraic and differential geometry

Positivity in Algebraic Geometry I R.K. Lazarsfeld, 2004-08-24 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to

concrete examples applications and pointers to further developments Volume I is more elementary than Volume II and for the most part it can be read without access to Volume II

Positivity in Algebraic Geometry II R.K. Lazarsfeld, 2017-07-25 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover editions as Vols 48 and 49 in the series *Ergebnisse der Mathematik und ihrer Grenzgebiete*

Algebraic Geometry 2 Kenji Ueno, 1999 Modern algebraic geometry is built upon two fundamental notions schemes and sheaves The theory of schemes was explained in *Algebraic Geometry 1 From Algebraic Varieties to Schemes* see Volume 185 in the same series *Translations of Mathematical Monographs* In the present book Ueno turns to the theory of sheaves and their cohomology Loosely speaking a sheaf is a way of keeping track of local information defined on a topological space such as the local holomorphic functions on a complex manifold or the local sections of a vector bundle To study schemes it is useful to study the sheaves defined on them especially the coherent and quasicoherent sheaves The primary tool in understanding sheaves is cohomology For example in studying ampleness it is frequently useful to translate a property of sheaves into a statement about its cohomology The text covers the important topics of sheaf theory including types of sheaves and the fundamental operations on them such as coherent and quasicoherent sheaves proper and projective morphisms direct and inverse images Čech cohomology For the mathematician unfamiliar with the language of schemes and sheaves algebraic geometry can seem distant However Ueno makes the topic seem natural through his concise style and his insightful explanations He explains why things are done this way and supplements his explanations with illuminating examples As a result he is able to make algebraic geometry very accessible to a wide audience of non specialists The book contains numerous problems and exercises with solutions It would be an excellent text for the second part of a course in algebraic geometry
