Earliest Ships:

The Earliest Ships Robert Gardiner, Arne Emil Christensen, 1996 Researching back into prehistory and into the earliest evidence provided by archaeology this volume explores the varied lines of development from the most primitive watercraft to the first real seagoing ships from Northern Europe through the Mediterranean to the Near and Far East It traces the most primitive forms of boats rafts skin boats and dugouts for example which developed ultimately into ships for trade commerce and war Apart from chapters on the craft themselves there are sections on related topics including early pilotage and seamanship and an evaluation of what modern reconstructions can tell us about the performance of ancient ship types The Earliest Ships not only summarises existing information but has been produced by many of those whose pioneering work was responsible for the revolution in understanding in the first place

Early Ships and Seafaring: Water Transport Beyond Europe Seán McGrail, 2015-06-30 In this volume Professor Sen McGrail introduces the reader to a relatively new branch of Archaeology the study of water transport how early rafts boats and ships were built and used Concepts such as boatbuilding traditions ship stability and navigation without instruments are first described Archaeological research is then discussed including sea levels in earlier times how to distinguish the vestigial remains of a cargo vessel from those of a fighting craft and the difference between a boat and a ship Chapters 2 and 3 the heart of the text deal with the early water transport of the Mediterranean and Atlantic Europe from the Stone Age to Medieval times Each chapter includes a description of the region s maritime geography and an exposition of its boat building traditions The third element is a discussion of the propulsion the steering and the navigation of these early vessels The sparse often jumbled remains of excavated vessels have to be interpreted a process that is assisted by consideration of early descriptions and illustrations Studies of the way traditional builders of wooden boats ply their trade today are also a great help Experimental boat archaeology is still at an early stage but when undertaken rigorously it can reveal aspects of the vessel s capabilities Such information is used in this volume to further our understanding of data from boat and ship excavations and to present as coherent comprehensive and accurate a picture as is now possible of early European boatbuilding and use

Archaeology and the Social History of Ships Richard A. Gould, 2011-04-29 Maritime archaeology deals with shipwrecks and is carried out by divers rather than diggers It embraces maritime history and analyses changes in shipbuilding navigation and seamanship and offers fresh perspectives on the cultures and societies that produced the ships and sailors Drawing on detailed past and recent case studies Richard A Gould provides an up to date review of the field that includes dramatic new findings arising from improved undersea technologies This second edition of *Archaeology and the Social History of Ships* has been updated throughout to reflect new findings and new interpretations of old sites The new edition explores advances in undersea technology in archaeology especially remotely operated vehicles The book reviews many of the major recent shipwreck findings including the Vasa in Stockholm the Viking wrecks at Roskilde Fjord and the Titanic
