Biodiversity And Conservation:

Conservation Biology for All Navjot S. Sodhi, Paul R. Ehrlich, 2010-01-07 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conservation and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources

Biodiversity and Conservation: Response to biodiversity loss Richard J. Ladle, 2009 Although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word's first appearance in the language in the mid 1980s In 1973 for instance the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also reached said the symposium at a meeting of the Linnaean Society some forty years earlier By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity Indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement Indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies It is increasingly taught and studied in universities and other research institutions around the world Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment Edited by Richard Ladle of Oxford University's Centre for the Environment this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates

Biodiversity Conservation and Habitat Management - Volume I Francessa

Gherardi, Claudia Corti, Manuela Gualtieri, 2009-12-29 Biodiversity Conservation and Habitat Management is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Biodiversity is declining worldwide at a very unprecedented rate as a complex response to several human induced changes in the global environment The magnitude of these changes is so large and their effects are so strongly linked to the altered ecosystem processes and to human abuse of natural resources that biodiversity loss is today perceived as one of the most important issues that humankind should face with extreme urgency Disseminating information raising awareness and propelling concern within a diversified target audience general public schools local authorities and government agencies are also essential to develop shared responsibility and to encourage collaborative efforts and compliance This has been the main objective of Biodiversity Conservation and Habitat Management The Theme on Biodiversity Conservation and Habitat Management provides the essential aspects and a myriad of issues of great relevance to our world in eight major topics of discussion and is focused on 1 History and Overview of Biodiversity Conservation and Protected Areas 2 Management of Forests and other Wooded Habitats 3 Management of Savannahs and Other Open Habitats 4 Management of Wetlands 5 Management of Tourism and Human Recreation Pressure 6 Conservation Strategies Species Action Plans and Translocation 7 Captive Breeding and Gene Banks and 8 Eradication and Control of Invasive Species These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Policy and Practice in Climate Change and Biodiversity Conservation Asha Ramachandran, 2024-12-11 Climate change and biodiversity decline are the major challenges humankind is now facing with profound consequences for people and the ecosystems Continuous policy crafting is a prerequisite in mitigating climate change maladies as the world is witnessing an unprecedented eruption of climate induced catastrophes including heat waves hurricanes unseasonal rain and diseases spurred by climate change and globalization This book gives a bird s eye view of climate change biodiversity conservation and practical policy imperatives for mitigating inauspicious climate impacts in a globalized digital era The briefing looks at the relationships and describes policies that promote the interconnectedness of biodiversity and climate action which is essential for effective environmental stewardship This also conveys how improperly resolving one problem can make it harder to improve another The book is useful for academics policy makers scholars researchers health professionals and people involved in climate change research and mitigation strategies Contested Nature Steven R. Brechin, Peter R.

Wilshusen, Crystal L. Fortwangler, Patrick C. West, 2012-02-01 How can the international conservation movement protect biological diversity while at the same time safeguarding the rights and fulfilling the needs of people particularly the poor Contested Nature argues that to be successful in the long term social justice and biological conservation must go hand in hand The protection of nature is a complex social enterprise and much more a process of politics and of human organization

than ecology Although this political complexity is recognized by practitioners it rarely enters into the problem analyses that inform conservation policy Structured around conceptual chapters and supporting case studies that examine the politics of conservation in specific contexts the book shows that pursuing social justice enhances biodiversity conservation rather than diminishing it and that the fate of local peoples and that of conservation are completely intertwined **Biodiversity**

Conservation Charles A. Perrings, Karl-Göran Mäler, Carl Folke, C.S. Holling, Beng-Owe Jansson, 2012-12-06 This book reports the more policy oriented results of the Biodiversity programme of the Royal Swedish Academy of Sciences Beijer Institute The programme brought economists and ecologists together to consider where the problem in biodiversity loss really lies what costs it has for society and how it might best be addressed The results are strikingly different from those reported in other works on the subject Biodiversity loss matters for all ecosystems not just the megadiversity tropical forests And it matters because it compromises the resilience and so the productivity of those systems Biodiversity conservation requires the development of policies that change the behaviour of resource use everywhere not just in parks and reserves The book is required reading for researchers and policy makers alike It canvasses options for the reform of park management biodiversity conservation projects property rights tax trade and price regimes that are within the reach of governments everywhere **Ethics in Biodiversity Conservation**

Patrik Baard, 2021-11-28 This book examines the role of ethics and philosophy in biodiversity conservation The objective of this book is two fold on the one hand it offers a detailed and systematic account of central normative concepts often used but rarely explicated nor justified within conservation biology Such concepts include values both intrinsic instrumental and more recently relational rights and duties The second objective is to emphasize to environmental philosophers and applied ethicists the many interesting decision making challenges of biodiversity conservation The book argues that a nuanced account of instrumental values provides a powerful tool for reasoning about the values of biodiversity It also scrutinizes relational values the concept of rights of nature and risk and show how moral philosophy proves indispensable for these concepts Consequently it engages with recent suggestions on normative aspects of biodiversity conservation and show the need for moral philosophy in biodiversity conservation The overriding aim of this book is to provide conservation biologists and policy makers with a systematic overview of concepts and assessments of the reasons for reaching prescriptive conclusions about biodiversity conservation This will prove instrumental in clarifying the role of applied ethics and a refined understanding of the tools it can provide This title will be of interest to students and scholars of conservation biology conservation policy environmental ethics and environmental philosophy **Saving Nature's Legacy**

Reed F. Noss, Allen Cooperrider, 1994-04 Contains specific guidelines and techniques for maintaining biodiversity within different ecosystems For land managers needing guidance in biodiversity conservation [Biodiversity Conservation and Utilization in a Diverse World](#) Gbolagade Akeem Lameed, 2012-08-29 This book Biodiversity Conservation and Utilization in a Diverse World sees biodiversity as management and utilization of

resources in satisfying human needs in multi sectional areas including agriculture forestry fisheries wildlife and other exhaustible and inexhaustible resources Its value is to fulfill actual human preferences and variability of life is measured by amount of genetic variation available In viewing diversity as an ultimate moral value one is faced with a situation in environmental preservation in order to allow components of total diversity to flourish and constitute a threat to continuous existence and decrease total diversity The overall importance described economic benefits from bio diversity though difficult to measure and varying but are limited on a local scale increase on a regional or national scale and become potentially substantial on a transnational or global scale

Biodiversity Conservation in Costa Rica G. W. Frankie, Alfonso Mata, S. Bradleigh Vinson, 2004 Annotation A collection of papers regarding the conservation of Costa Rica s tropical dry forest which is disappearing more rapidly than its rain forest due to ease of conversion to agriculture

Biodiversity Monitoring and Conservation Ben Collen, Nathalie Pettorelli, Jonathan E. M. Baillie, Sarah M. Durant, 2013-02-14 As the impacts of anthropogenic activities increase in both magnitude and extent biodiversity is coming under increasing pressure Scientists and policy makers are frequently hampered by a lack of information on biological systems particularly information relating to long term trends Such information is crucial to developing an understanding as to how biodiversity may respond to global environmental change Knowledge gaps make it very difficult to develop effective policies and legislation to reduce and reverse biodiversity loss This book explores the gap between global commitments to biodiversity conservation and local action to track biodiversity change and implement conservation action High profile international political commitments to improve biodiversity conservation such as the targets set by the Convention on Biological Diversity require innovative and rapid responses from both science and policy This multi disciplinary perspective highlights barriers to conservation and offers novel solutions to evaluating trends in biodiversity at multiple scales

Biodiversity Conservation and Environmental Change Lindsey Gillson, 2015 Discusses how a knowledge of long term change in ecosystems can inform and influence their conservation integrating perspectives from archaeology environmental history and palaeoecology

Biodiversity Conservation in Southeast Asia Serge Morand, Claire Lajaunie, Rojchai Satrawaha, 2017-07-28 Southeast Asia is highly diversified in terms of socio ecosystems and biodiversity but is undergoing dramatic environmental and social changes These changes characterize the recent period and can be illustrated by the effects of the Green Revolution in the late 1960s and 1970s to the globalization of trade and increasing agronomic intensification over the past decade Biodiversity Conservation in Southeast Asia provides theoretical overviews and challenges for applied research in living resource management conservation ecology health ecology and conservation planning in Southeast Asia Five key themes are addressed origin and evolution of Southeast Asian biodiversity challenges in conservation biology ecosystem services and biodiversity managing biodiversity and living resources policy economics and governance of biodiversity Detailed case studies are included from Thailand and the Lower Mekong Basin while other chapters address cross cutting themes applicable to the whole Southeast

Designing Field Studies for Biodiversity Conservation Peter Feinsinger, 2001-07-01 Anyone working in biodiversity conservation or field ecology should understand and utilize the common sense process of scientific inquiry observing surroundings framing questions answering those questions through well designed studies and in many cases applying results to decision making Yet the interdisciplinary nature of conservation means that many workers are not well versed in the methods of science and may misunderstand or mistrust this indispensable tool Designing Field Studies for Biodiversity Conservation addresses that problem by offering a comprehensible practical guide to using scientific inquiry in conservation work In an engaging and accessible style award winning tropical ecologist and teacher Peter Feinsinger melds concepts methods and intellectual tools into a unique approach to answering environmental questions through field studies Focusing on the fundamentals of common sense independent thinking and natural history he considers framing the question and designing the study interpreting and applying results through judicious use of statistical inference taking into account the natural history of plants animals and landscapes monitoring and assessing progress through approaches such as bioindicator species or species diversity measures helping other interested parties park guards local communities school teachers use scientific inquiry in addressing their own concerns Detailed appendixes explain technical issues while numerous sidebars and illustrations provide important background and thought provoking exercises Throughout the author challenges the reader to integrate conceptual thinking

with on the ground practice in order to make conservation truly effective Feinsinger concentrates on examples from Latin America but stresses that the approach applies to local conservation concerns or field biology questions in any landscape
