Biodiversity And Environment:

Biodiversity and Environmental Philosophy Sahotra Sarkar,2005-09-19 This book explores the epistemological and ethical issues at the foundations of environmental philosophy emphasising the conservation of biodiversity Sahota Sarkar criticises attempts to attribute intrinsic value to nature and defends an anthropocentric position on biodiversity conservation based on an untraditional concept of transformative value Unlike other studies in the field of environmental philosophy this book is as much concerned with epistemological issues as with environmental ethics It covers a broad range of topics including problems of explanation and prediction in traditional ecology and how individual based models and Geographic Information Systems GIS technology is transforming ecology Introducing a brief history of conservation biology Sarkar analyses the consensus framework for conservation planning through adaptive management He concludes with a discussion of directions for theoretical research in conservation biology and environmental philosophy **Biodiversity in**

Environmental Assessment Roel Sloutweg,Asha Rajvanshi,Vinod B. Mathur,Arend Kolhoff,2009-11-12 Human induced development activities are introduced with insufficient attention to their consequences for our living environment even in cases where environmental assessments have been carried out This apparent lack of attention to biodiversity in environmental assessment is rooted in the difficulties we have in adequately addressing biodiversity within the scope time frame and budget allocated for assessments This book provides a conceptual background and practical approaches to overcome these difficulties It integrates the objectives of the Convention on Biological Diversity its ecosystem approach and the conceptual framework of the Millennium Ecosystem Assessment into a comprehensive approach to biodiversity in environmental assessment It highlights the need to consider the value of biodiversity based on its use by each stakeholder addresses the importance of both social and economic development to reach the Millennium Development Goals and provides insights into ways to balance present and future needs Biodiversity and Conservation Michael J. Jeffries, Mike J.

Jeffries,2006 Updated to reflect new research and developments and with original international case studies this excellent book remains the only introductory text to bring together the theory and practice that make up biodiversity and conservation

Biodiversity in a Changing Climate Terry Louise Root,Kimberly R. Hall,Mark P. Herzog,Christine A. Howell,2015-06-16 Building upon the rapidly growing body of literature documenting how natural systems are responding to and are at risk from human induced climate change this book provides case study examples of how a diverse range of species and ecological systems in California are changing with the climate These case studies originate from multiple ecological fields genetics population biology habitat studies community ecology landscape ecology paleobiology and are framed by chapters describing approaches and tools for climate adaptation planning reviewing climate impacts and biological responses and encouraging the use of historical data This framing emphasizes the need for partnerships between researchers and resource managers in addressing climate related challenges and highlights how communication strengthens these partnerships with conversations

between chapter authors and managers Such connections help move advances in science from research reports to on the ground changes that help protect species and support all life Provided by publisher
