Geochemistry of Organic Matter in the Ocean Evgenii A. Romankevich,2013-11-11 My work Geochemistry of organic matter in the ocean first appeared in Russian in 1978 Since then much progress has been made in the exploration of various forms of organic matter in the ocean dissolved colloidal organic matter suspended in particles and that contained in bottom sediments and in interstitial waters The appropriate evidence is found in hundreds of articles and several review works such as Andersen 1977 Biogeochemie de a matiere organique a interjace eau sedimentmarine 1980 Duursma and Dawson 1981 A great amount of new information has been obtained in the Soviet Union s scientific institutions on the composition and distribution in natural waters and bottom sediments of organic matter and its separate components playing a crucial role in the formation of the chemical and biological structure of the ocean and its productivity in the biogeochemistry of the elements and geochemistry of organic matter in the Earth s sedimentary cover The areas of exploration have expanded over the past four and a half years to embrace many new little known regions including the Arctic seas In contrast to the three preceding decades the research has been focused on investigating the existing forms the distribution and accumulation of organic matter in near continental oceanic zones between land and sea and in river estuaries

International Review of Cytology ,1991-08-29 International Review of Cytology *Fjord Oceanography* Howard Freeland,2012-12-06 Fjords are deep glacially carved estuaries that are peculiar to certain coastlines and have several characteristics that distinguish them from shallower embayments At higher latitudes they indent the western coastlines of Scandinavia North and South America and New Zealand They are also a common feature of much of the arctic coastline The papers contained in this volume were presented at a workshop funded by the NATO Advanced Studies Institute in Victoria British Columbia It may seem curious to the reader that this special class of estuaries should have attracted an international gathering of oceanographers from several different disciplines The reason for this interest stems from both practical and scientific considerations On the one hand fjords are a feature common to the coastlines of several countries that depend heavily on the oceans for communication fisheries and other resources The impact of man s activities

on these coasts has created a demand for new knowledge of the physical, biological and chemical aspects of fjords. Sometimes man's influence on the ocean is intentional as for example in the artificial control of ice cover often it is the more insidious build up of toxic wastes that is of concern. These problems are particularly acute where the conflicting demands of fisheries, industrial development and recreation meet in a single fjord and indeed this is a common occurrence along several of the fjords in Scandinavia and Canada.
