leading biologist offers a comprehensive and accessible history of invasive species science from its earliest antecedents
through its current research foci and controversies From the arrival of the naval shipworm in the Black Sea in the first
millennium BC to the escape of the Burmese python in Florida in 1992 humans have moved species to new locations
deliberately or inadvertently for thousands of years Agricultural and environmental impacts of some invasions were evident
early although whether observers recognized that the cause was an introduced species is uncertain The history of invasion
biology truly begins in the sixteenth through eighteenth centuries when explorers noticed European species on various
distant islands and in North America In the nineteenth century biogeographers studying species distributions across the
globe introduced the first native and non native species categorizations and prominent researchers like Charles Darwin
began to describe the impacts of introduced species In the nineteenth and twentieth centuries as humans moved increasing
numbers of species across the globe the advent of modern ecology deepened our understanding of the scope of the problem
In *Ecological Explosions* invasive species expert Daniel Simberloff provides a thorough overview of the development of
