ABSTRACT: The development of science and technology is very fast and increasingly sophisticated, so schools as educational institutions are required to train critical thinking skills which are one of the skills demanded in 21st century learning. However, the facts found in schools are that the level of students' critical thinking skills is still relatively low. . One of the media that is effectively used to overcome problems related to low critical thinking skills is the E-module. E-module is a form of presenting self-learning material in electronic format which is arranged systematically into the smallest learning units which include animation, audio, video and navigation so that users are more interactive in learning. This type of research is Research and Development (R&D) research using the Plomp Model. The object of this research is a biology E-module based on a scientific approach to biodiversity material to improve the critical thinking skills of class X high school students. The subjects of this study were three lecturers from the Department of Biology, FMIPA UNP, and one teacher at SMAN 1 Ranah Pesisir as validators for the use of the biology learning E-module. Based on the validation results, it can be concluded that the overall value of the validity results for the development of a biological E-module based on a scientific approach is in the valid category, meaning that the E-module is feasible to be tested in schools.

KEYWORDS: E-Modul, Scientific Approach, Critical Thinking Skills.

INTRODUCTION

Learning biology is part of science which includes facts, laws and principles resulting from scientific processes that require problem solving through critical thinking skills (Agnafia, 2019: 45). Critical thinking is important to develop because it can improve the quality of thinking for students in solving problems related to Biology lessons (Wulandari et al., 2021: 66). Moreover, currently science and technology are developing very fast and are increasingly sophisticated, so schools as educational institutions are required to train critical thinking skills which are one of the skills required in 21st Century learning (Sepdikasari, 2018: 108).

The importance of promoting students' critical thinking skills so that they can take action to make the right decisions in accordance with scientific truths and be able to solve the problems they face. However, the fact found in schools is that the level of students' critical thinking skills is still relatively low. This is in accordance with the results of the questionnaire analysis in the form of critical thinking skills questions that the researchers did in class X SMAN 2 Padang and SMAN 1 Ranah Pesisir with a total of 69 students as shown in Table 1.

Table 1. Percentage Results of Students' Critical Thinking Skills

Class	Indicator	Percentage	Description
X MIPA	Give a simple explanation	58.3%	Passably
	Build basic skills	69.6%	Good
	Conclude	40%	Deficient
	Provide further explanation	39.6%	Deficient
	Set strategy and tactics	38.7%	Deficient

Source: Observation Results based on Indicators put forward by Ennis (1985)

Based on the results of the analysis of the critical thinking skills questionnaire above, it shows that there are still several indicators that are in the unfavorable category. This is in accordance with the observational data that has been carried out at SMAN 2 Padang and SMAN 1 Ranah Pesisir, obtained information that students have not been able to take strategies in solving problem-based questions. Therefore, students' critical thinking skills are still relatively low.

Using Systems Thinking to Improve Critical Thinking and Problem Solving Skills in High School Biology Students Sara Collins,2014 This study was to discover whether using a systems thinking approach to teaching 10th grade biology could improve the critical thinking and problem solving skills of students Students took a brief survey both before and after the intervention to ascertain how they felt about their problem solving and critical thinking skills Also two concept map activities were completed in order to try to assess student systems thinking skills using a systems thinking hierarchy Data was collected in a table and the survey questions were then analyzed using simple bar graphs Concept maps had the connections counted according to a systems thinking hierarchy It was found in this study that while collaborative grouping of students appeared to increase a student's confidence in their problem solving and critical thinking skills there was no indication that the teaching method used improved a student's systems thinking abilities
