Biosocial Aspects Of Social Class:

Biosocial Aspects of Social Class C. G. N. Mascie-Taylor, 2023 Four contributions on various aspects of social class are brought together concentrating on different concepts of social class the associations between class and mortality in Britain demography and the biological variables that are associated with social class **Social and Biological Aspects of**

Ethnicity Malcolm Chapman, 1993 This book details the biology and sociology of ethnicity showing how the two factors influence each other The book first introduces the history of the concept of ethnicity and discusses recent uses of the term in social anthropology The view that ethnic groups are biological entities which pervades most academic disciplines is contrasted to the current social anthropological idea that ethnic groups are self defined social creations Social decisions and actions by ethnic groups are shown to have significant biological effects as exemplified by genetic and epidemiological data The book includes an in depth case study of the Basque people and shows the relevance of social and biological criteria for identifying ethnic membership Researchers and students in sociobiology human psychology and social and biological anthropology will want to read this important new work *Human Population Dynamics* Helen Macbeth, Paul

Collinson, 2002-06-20 In human populations biological social spatial ecological and economic aspects of existence are inextricably linked demanding a holistic approach to their study Many undergraduate and postgraduate courses now emphasise the value of studying human populations using theoretical frameworks and methodologies from different traditional disciplines Human Population Dynamics introduces such frameworks and methodologies whilst demonstrating how changes in human population structure can be addressed from several different academic perspectives As such the book contains contributions from world renowned researchers in demography social and biological anthropology genetics biology sociology ecology history and human geography In particular the contributors emphasise the lability of many population structures and boundaries as viewed from their area of expertise This text is aimed at undergraduate students graduates and academic researchers from any academic discipline which considers human populations *Sex, Gender and Health* Tessa M. Pollard, Susan Brin Hyatt, 1999-08-26 Explores differences in health experiences of boys girls men and women from both biological and social perspectives Hunter-Gatherers Catherine Panter-Brick, Robert H. Infertility in the Modern World Gillian R. Bentley, C. G. Nicholas Mascie-Taylor, 2000-11-30 An interdisciplinary perspective on the ways in which human biology and culture can affect fertility *Handbook of Social Status Correlates* Lee Ellis, Anthony W. Hoskin, Malini Ratnasingam, 2018-01-26 The Handbook of Social Status Correlates summarizes findings from nearly 4000 studies on traits associated with variations in socioeconomic status Much of the information is presented in roughly 300 tables each one providing a visual snapshot of what research has indicated regarding how a specific human trait appears to be correlated with socioeconomic status The social status measures utilized and the countries in which each study

was conducted are also identified QUESTIONS ADDRESSED INCLUDE THE FOLLOWING Are personality traits such as extraversion competitiveness and risk taking associated with social status How universal are sex differences in income and other forms of social status What is the association between health and social status How much does the answer vary according to specific diseases How well established are the relationships between intelligence and social status Is religiosity associated with social status or does the answer depend on which religion is being considered Are physiological factors correlated with social status even factors involving the brain Finally are there as yet any universal correlates of social status

The New Temperance David Wagner, 2018-02-12 The war on drugs the campaigns against smoking cigarettes v chips to control what children watch on TV censoring the Internet and Calvin Klein jeans ads bipartisan lectures about the dangers of teen sex constant warnings about food and fat all are examples of what David Wagner terms the New Temperance The New Temperance contrasts the new obsession with personal behavior in America during the last two decades with the brief period of relative freedom in the 1960s and early 1970s and suggests strong consistencies with our past In particular the late twentieth century appears to have re created the mood of the Victorian and Progressive Periods when social movements such as the Temperance Social Purity and Vice and Vigilance movements held sway The New Temperance questions the constant mantra in the media and in political debates about the dangers of personal behavior and challenges America s love affair with repression

Learning from HIV and AIDS George Ellison, Melissa Parker, Catherine Campbell, 2003-10-30 Different professional and academic disciplines have addressed the HIV AIDS pandemic from a variety of perspectives using different analytical approaches By bringing these together in one volume Learning from HIV AIDS provides a more complete picture of this multi faceted disease from the biological and social factors which facilitate HIV transmission to the powerful cultural and political forces which fuel the pandemic Chapters from contributors working on the aetiology treatment and prevention of HIV AIDS identify how their work has helped predict the spread of HIV and has improved the survival of those infected Yet interventions to reduce the spread of HIV have had limited success and few HIV infected individuals have access to combination drug therapies Written for students and researchers and taking an interdisciplinary perspective this book demonstrates that progress in developing effective and acceptable interventions can only be achieved through collaboration between the biological medical and social sciences

F. ROBERTS, 1979 **Embodying Inequality** Nancy Krieger, 2005 To advance the epidemiological analysis of social inequalities in health and of the ways in which population distributions of disease disability and death reflect embodied expressions of social inequality this volume draws on articles published in the International Journal of Health Services between 1990 and 2000 Framed by ecosocial theory it employs ecosocial constructs of

embodiment pathways of embodiment cumulative interplay of exposure susceptibility and resistance across the lifecourse and accountability and agency to address the question and who and what drives current and changing patterns of social inequalities in health

Human Populations Anthony J. Boyce, Vernon Reynolds, 1995 Human populations groups of people living together and sharing a number of biological and social characteristics differ from one another in many important respects Human Evolution Diversity and Adaptation provides a succinct and insightful exploration of the many genetic and environmental conditions that have led to such differences In describing the specific kinds of diversity genetic morphological social and disease associations the book presents case studies that clearly show how such differences interact to produce the variety of human populations that exist around the world It also stresses the point that human history is to some extent the history of migration resulting in populations that are not discrete entities but rather a continuous gradation of various physical and cultural attributes Splendidly written by leading experts Human Evolution is an excellent compendium that explores the multifaceted field of human evolution

The Criminal Brain, Second Edition Nicole Rafter, Chad Posick, Michael Rocque, 2016-08-30 A lively up to date overview of the newest research in biosocial criminology What is the relationship between criminality and biology Nineteenth century phrenologists insisted that criminality was innate inherent in the offender s brain matter While they were eventually repudiated as pseudo scientists today the pendulum has swung back Both criminologists and biologists have begun to speak of a tantalizing but disturbing possibility that criminality may be inherited as a set of genetic deficits that place one at risk to commit theft violence or acts of sexual deviance But what do these new theories really assert Are they as dangerous as their forerunners which the Nazis and other eugenicists used to sterilize incarcerate and even execute thousands of supposed born criminals How can we prepare for a future in which leaders may propose crime control programs based on biology In this second edition of *The Criminal Brain* Nicole Rafter Chad Posick and Michael Rocque describe early biological theories of crime and provide a lively up to date overview of the newest research in biosocial criminology New chapters introduce the theories of the latter part of the 20th century apply and critically assess current biosocial and evolutionary theories the developments in neuro imaging and recent progressions in fields such as epigenetics and finally provide a vision for the future of criminology and crime policy from a biosocial perspective The book is a careful critical examination of each research approach and conclusion Both compiling and analyzing the body of scholarship devoted to understanding the criminal brain this volume serves as a condensed accessible and contemporary exploration of biological theories of crime and their everyday relevance
