Biotechnology For Environmental Protection In The Pulp And Paper Industry:

Biotechnology for Environmental Protection in the Pulp and Paper Industry P. Bajpai, R. Kondo, 2012-12-06 Pulp and paper production has increased globally and will continue to increase in the near future. Approximately 155 million tons of wood pulp is produced worldwide and about 260 million is projected for the year 2010. To be able to cope with increasing demand, an increase in productivity and improved environmental performance is needed as the industry is also under constant pressure to reduce and modify environmental emissions to air and water. The authors give updated information on various biotechnological processes useful in the pulp and paper industry which could help in reducing the environmental pollution problem in addition to other benefits. Various chapters deal with the latest developments in such areas as raw material preparation, pulping, bleaching, water management, waste treatment and utilization. The book also covers the environmental regulations in various parts of the world as well as the role of biotechnology in reducing environmental problems.

Microbial Xylanolytic Enzymes Pratima Bajpai, 2022-05-29 *Microbial Xylanolytic Enzymes* describes the enzyme structure and its interaction with plant cell walls, the properties and production of different enzymes and their applications, and the knowledge gathered on the hydrolysis mechanism of hemicellulose. The knowledge gathered about the hydrolysis mechanism of the hemicelluloses, especially xylans, has greatly promoted the rapid application of these enzymes in new areas. In recent years, there has been a spurt of interest in xylan-degrading enzymes due to their applications in several industrial processes including paper and pulp industries, food and feed industries, biofuel industry, textile industry, chemical and pharmaceutical industry, brewing industry, and more. Xylan is the principal type of hemicellulose. An enzymatic complex is responsible for the hydrolysis of xylan, but the main enzymes involved are enzymes produced by fungi, bacteria, yeast, algae, protozoans, and more. Gives up-to-date authoritative information and cites pertinent research on the synergistic action of xylanolytic enzymes. Includes studies on xylanase regulation and synergistic action between multiple forms of xylanase. Covers in great depth all aspects of Xylanolytic enzymes. Includes detailed descriptions on Xylanolytic enzymes as a supplement in animal feed for the manufacture of bread, food and drinks, textile industry, pulp and paper industry, biofuel industry, and production of pharmaceuticals and important chemicals and waste management, etc. Challenges future trends in the commercial production and application of xylanases.
