Terra Michael Novacek,2008-11-11 A paleontologist awakens us to the extinction event that human activity is bringing about today The natural world as humans have always known it evolved close to 100 million years ago with the appearance of flowering plants and pollinating insects during the age of the dinosaurs Its tremendous history is now in danger of profound catastrophic disruption In *Terra* a brilliant synthesis of evolutionary biology paleontology and modern environmental science Michael Novacek shows how all three can help us understand and prevent

what he and others call today's mass extinction event. Humanity's use of land, our consumption, the pollution we create, and our contributions to global warming are causing this crisis. True, the fossil record of hundreds of millions of years reveals that wild and bounteous nature has always evolved not quietly but thunderously as species arise, flourish, die off, and are replaced by new species. We learn from paleontology and archaeology that for 50,000 years, human hunting, mining, and agriculture have changed many localities, sometimes irrevocably. But today, Novacek insists, our behavior endangers the entire global ecosystem. And if we disregard through ignorance, antipathy, or apathy the theory of evolution that developed with our modern understanding of the Earth's past, we not only impede enlightenment but threaten any practical strategy for our own survival. The evolutionary future of the entire living planet depends on our understanding this.

Bone Wars Tom Rea, 2021-09-14. Foreword by Matthew C. Lamanna. New Afterword by Tom Rea. Less than one hundred years ago, *Diplodocus carnegii*, named after industrialist and philanthropist Andrew Carnegie, was the most famous dinosaur on the planet. The most complete fossil skeleton unearthed to date and one of the largest dinosaurs ever discovered, *Diplodocus* was displayed in a dozen museums around the world and viewed by millions of people. *Bone Wars* explains how a fossil unearthed in the badlands of Wyoming in 1899 helped give birth to the public's fascination with prehistoric beasts. Rea also traces the evolution of scientific thought regarding dinosaurs and reveals the double crosses and behind-the-scenes deals that marked the early years of bone hunting. With the help of letters found in scattered archives, Tom Rea recreates a remarkable story of hubris, hope, and turn of the century science. He focuses on the roles of five men: Wyoming fossil hunter Bill Reed, paleontologist Jacob Wortman in charge of the expedition that discovered Carnegie's dinosaur, and John Bell Hatcher, William Holland, imperious director of the recently founded Carnegie Museum, and Carnegie himself, smitten with the colossal animals after reading a story in the *New York Journal and Advertiser*. What emerges is the picture of an era reminiscent of today's technology advancing by leaps and bounds, the press happy to sensationalize anything that turned up huge amounts of capital ending up in the hands of a small number of people, and some devoted individuals placing honest research above personal gain.

[Enigmatic Events](#) Gary L. Blackwood, 2006. Explores several events that have baffled scientists and historians for years, such as the demise of dinosaurs, the lost colony of Roanoke, the sinking of the *Maine*, and the Hindenburg disaster.

Dinosaurs, the Encyclopedia Donald F. Glut, 2002. Synopsis. Writer and movie director and producer Glut, who specializes in dinosaurs, continues to expand his 1997 reference on the extinct creatures by compiling new information based on recent research by paleontologists and corrected or emended old information. He intends to provide a handy reference tool for professional scientists and students, as well as less technical information of interest to the more casual dinosaur enthusiast. The main section describes the dinosaurian genera; others consider systematics, doubtful taxa that have been named but not fully described or delineated, and excluded genera. Annotation 2004. Book News, Inc.

Dinosaurs Wendy Stein, 1994. Examines various viewpoints on the nature of dinosaurs and why they became extinct.
