**Recombinant Protein Production with Prokaryotic and Eukaryotic Cells. A Comparative View on Host Physiology** Otto-Wilhelm Merten,D. Mattanovich,C. Lang,G. Larsson,P. Neubauer,D. Porro,P. Postma,J. Teixeira de Mattos,J.A. Cole,2013-04-17 More then 20 years have passed now since the first recombinant protein producing microorganisms have been developed In the meanwhile numerous proteins have been produced in bacteria yeasts and filamentous fungi as well as higher eukaryotic cells and even entire plants and animals Many recombinant proteins are on the market today and some of them reached substantial market volumes On the first sight one would expect the technology including the physiology of the host strains to be optimised in detail after a 20 year s period of development However several constraints have limited the incentive for optimisation especially in the pharmaceutical industry like the urge to proceed quickly or the requirement to define the production parameters for registration early in the development phase The additional expenses for registration of a new production strain often prohibits a change to an optimised strain A continuous optimisation of the entire production process is not feasible for the same reasons Reversal of Fortune? proceedings of the 1986 annual meeting and conference of the Society for Risk Analysis It provides a detailed view of both mature disciplines and emerging areas within the fields of health safety and environmental risk analysis as they existed in 1986 In selecting and organizing topics for this conference we sought both i to identify and include new ideas and application areas that would be of lasting interest to risk analysts and to users of risk analysis results and ii to include innovative methods and applications in established areas of risk analysis In the three years since the conference many of the topics presented there for the first time to a broad risk analysis audience have become well developed and sometimes hotly debated areas of applied risk research Several such as the public health hazards from indoor air pollutants radon in the home high voltage electric fields and the AIDS epidemic have been the subjects of headlines since 1986 Older areas such as hazardous waste site ranking and remediation air emissions dispersion modeling and exposure assessment transportation safety seismic and nuclear risk assessment and occupational safety in the chemical industry have continued to receive new treatments and to benefit from advances in quantitative risk assessment methods as documented in the theoretical and methodological papers in this volume A theme of the meeting was the importance of new technologies and the new and uncertain risks that they create
