**Implications of Disaster Preparedness for Nursing, An Issue of Nursing Clinics of North America** Deborah J. Persell,2016-11-18 According to the Center for Research and Epidemiology of Disasters the

frequency and severity of disasters has increased over 300% in the last decade. Healthcare systems and individual healthcare practitioners including nurses are now fulfilling multiple roles in disaster preparedness in the whole of community planning, preparedness, risk identification, mitigation, response, and recovery. Nurses are considered first responders for biological events or when the disaster occurs where they are working. Nurses act as first receivers when accepting patients/victims for care whose injuries result from non-biological events occurring outside the nurse's workplace. The vast majority of practicing nurses received no disaster preparedness education in their basic nursing education program. Nurses graduating in the 21st century are exposed to some of the concepts of disaster nursing but have little experience unless there is a disaster or emergency where they work or go to school. Readers will be updated on this topic because articles in this edition demonstrate a vast array of implications for nurses in disaster preparedness around the world: chemical, biological, radiological, nuclear, explosives, CBRNE, natural disasters, new models of training and educating nurses for disasters, military nurse response, mental health issues, as well as non-government organizations.

*International Disaster Nursing* Robert Powers, Elaine Daily, 2010-05-03. The effects of a disaster on healthcare can range from conditions that immediately besiege the system with large numbers of patients to catastrophes that strain its long-term sustainability. Nurses as frontline health professionals must have an understanding of the situations they may face before, during, and after a disaster, and they must develop the skills and strategies to provide effective and immediate care. *International Disaster Nursing* is the first truly comprehensive and internationally focused resource to address the diversity of issues and myriad scenarios that nurses and other health personnel could encounter during a disaster event. This text defines the many roles of the nurse within a multidisciplinary team and aids the implementation of the community's disaster plans in a crisis. With an alarming increase in the occurrence of disasters in the last decade, *International Disaster Nursing* is the hallmark text in the field.

**Disaster Nursing: A Handbook for Practice** Deborah Adelman, Timothy Legg, 2009-10-05. *Disaster Nursing: A Handbook for Practice* covers all aspects of disaster nursing, including being a first responder, disaster volunteering, disaster management on site and in a hospital, disaster preparedness, and hospital and community nursing response in a disaster. The only text of its kind, this Handbook covers all topics pertinent to disaster nursing from a leadership standpoint.

*Nursing Management of Pediatric Disaster* Catherine J. Goodhue, Nancy Blake, 2020-05-13 This textbook describes what nurses need to know about pediatric disaster nursing including public policy and addresses preparedness for all types of disasters, natural and man-made, and strategies for hospital, school, and community preparedness. The book opens with a brief history of disaster nursing and explains the key differences between pediatric and adult disaster nursing. Recent years have been marked by numerous man-made and natural disasters which have led nurses to seek new resources to be better prepared in their role as nurses for all types of disasters. Responding to this lack of resources, the book focuses on the unique needs of babies and children. It is the first and only textbook on pediatric disaster preparedness to include both the physical and psychological effects of disaster. Key aspects covered include the psychosocial differences in and how to approach children, family reunification, medications, supplies, and equipment, and decontamination. Given its breadth of coverage, the book is well suited as a textbook for nursing classes while also offering a valuable resource for nurses working in the field.

**Handbook on Climate Change and Disasters** Shaw, Rajib, 2022-10-13 This comprehensive Handbook assesses the escalation of global natural disasters as a result of climate change. Examining the complex interplay of human and natural activities, it highlights the growing vulnerability of people and communities in developing countries to floods, landslides, cyclones, heat waves, and wildfires.

Apart from hospitals, in local communities, nurses can take a role to mitigate health risks. Being a member of every
