*Breeding Plants for Less Favorable Environments* Meryl N. Christiansen, Charles Franklin Lewis, 1982 **Breeding Plants for Less Favorable Environments** M. N. (Meryl N.) Christiansen, Charles Franklin Lewis, 1990 Sustainable Agriculture in Temperate Zones Charles A. Francis, Cornelia Butler Flora, Larry D. King, 1991-01-16 This timely work reviews the best current thinking on practicing sustainable agriculture with contributions from agricultural biological environmental and social scientists The emphasis is on temperate zones with many of the contributions addressing U S agriculture However the principles explored here have application in any climatic or geographical region The book discusses stewardship biodiversity reliance on mixed food systems and other approaches always with a view toward reducing environmental degradation maintaining economic viability and stabilizing rural communities Heavy Metal Tolerance in Plants Jonathan Shaw, 2024-11-01 This volume provides a synthesis of recent work on evolutionary aspects of metal tolerance in plants It presents contributions from scientists with a wide diversity of expertise It covers the evolution of heavy metal tolerance in groups of plants fungi and protists The book discusses the physiological genetic and molecular aspects of metal tolerances It deals with the evolution of populations in metal contaminated environments Several chapters include tolerance in animals in order to place the rest of the book on plants in proper perspective This publication is an exciting addition for scientists with both applied and basic interest in metal toxicity and tolerance It is of importance to those in vegetation ecology land reclamation agronomy physiology population ecology ecological genetics evolutionary biology and molecular biology *Applications of Genetic Engineering to Crop Improvement* G.B. Collins, Joseph F. Petolino, 2012-12-06 The contributions of plant genetics to the production of higher yielding crops of superior quality are well documented These successes have been realized through the application of plant breeding techniques to a diverse array of genetically controlled traits Such highly effective breeding procedures will continue to be the primary method employed for the development of new crop cultivars however new techniques in cell and molecular biology will provide additional approaches for genetic modification There has been considerable speculation recently concerning the potential impact of new techniques in cell and molecular biology on plant improvement These genetic engineering techniques should offer unique opportunities to alter the genetic makeup of crops if applied to existing breeding procedures Many questions must be answered in order to identify specific applications of these new technologies This search for applications will require input from plant scientists working on various aspects of crop improvement This volume is intended to assess the interrelationships between conventional plant breeding and genetic engineering **Plant-Soil Interactions at Low pH** Robert J. Wright, V.C. Baligar, R. Paul Murrmann, 2012-12-06 Soil acidity is a major limitation to crop production in many parts of the world Plant growth inhibition results from a combination of factors including aluminum manganese and hydrogen ion toxicities and deficiencies of essential elements particularly calcium magnesium phosphorus and molybdenum Agricultural management practices and acid precipitation have increased

acid inputs into the ecosystem and heightened concern about soil acidity problems While application of lime has proved to be effective in ameliorating surface soil acidity in many areas significant soil acidity problems still exist Scientists from Alberta Canada recognized the need to provide a forum for researchers from different disciplines to exchange information and ideas on solving problems of plant growth in acid soils As a result of their efforts the First International Symposium on Plant Soil Interactions at Low pH was held at Grande Prairie Alberta Canada in July 1987 In many acid soil areas liming materials are not readily available the cost may be prohibitive or subsoil acidity cannot be corrected by surface application of lime New management approaches involving both the plant and the soil are needed in these situations Progress has been made in the selection and breeding of acid tolerant plants However continued progress will be limited by our lack of understanding of the physiological and biochemical basis of differential acidity tolerance among plants *CSSA Special Publication* ,1991
