Children's Language K. E. Nelson,2014-03-18 First published in 1983 This series Children s Language reflects the conviction that extensive work on entirely new fronts along with a great deal of reinterpretation of old front data will be necessary before any persuasive and truly orderly account of language For all volumes in the series there is a common scheme of operation with two tactics First to give authors sufficient planning time and freedom to arrive at a chapter length account of their area of thinking which vividly shows both the progress and the problems in that area with the author of each chapter free to find a workable proportion of new experimental contributions review and theory The second tactic concerns the selection of topics for each volume This is Volume 4 Structures about language and thought and children as employed in certain other fields may well be shaken and stimulated particularly in education sociology anthropology literature and language remediation

Children's Language: Revised Edition Ray Cattell, 2007-05-10 The popular notion of how children come to speak their first language is that their parents teach them words then phrases then sentences then longer utterances Although there is widespread agreement amongst linguists that this account is wrong there is much less agreement as to how children really learn language This revised edition of Ray Cattell's bestselling textbook aims to give readers the background necessary to form their own views on the debate and includes accessible summaries of key thinkers including Chomsky Halliday Karmiloff Smith and Piaget

Child-directed speech. Modifications in linguistic

input to children and their possible functions. Philipp Rott, 2003-11-10 Seminar paper from the year 2001 in the subject English Language and Literature Studies Linguistics University of Duisburg Essen Foreign Languages course Hauptseminar Language Acquisition SS 2001 language English abstract Anyone who has seen and heard a child speak his her first words and who has noticed how much language determines the progress of a child in becoming independent of his her parents and in mastering interaction with others must have wondered why it is that children can fulfil such an obviously complex task in such a surprisingly little time with seemingly little effort It appears almost impossible that the child can achieve so much all by himself herself Thus quite frequently people consider the linguistic input that is available to the child as a crucial factor for the child s language acquisition It is no wonder that he has learned to speak so fast with so many people around speaking to him and showing him how to speak is an utterance I heard quite often when my son was at the age when he started producing his first words But did I really help him to learn language Of course I noticed my own speech modifications as well as that of other people when conversing with him But does this special register which nearly everyone at least in our western culture seems to adapt when addressing children really make a difference Do we even teach our children to speak I will not attempt to answer these questions in the present paper as much more research is needed in this area However I want to give an overview on the different features of the language used when addressing children It will be shown on which principles of modification these features are based and which functions they might serve for the child Moreover it will be argued that some features of the speech to children may possibly facilitate language acquisition but that the language used to them is not necessarily simplified language
