This book constitutes the proceedings of the 18th IFIP International Conference on Distributed Applications and Interoperable Systems DAIS 2018 held in Madrid Spain in June 2018 The 10 papers presented together with 2 short papers in this volume were carefully reviewed and selected from 33 submissions The papers are organized in topical sections on application domains including stream processing video dissemination storage privacy protection and large scale orchestration **Topics in Distributed Algorithms** Gerard Tel,1991-07-11 **Introduction to Distributed Algorithms** Gerard Tel,2000-09-28 Distributed algorithms have been the subject of intense development over the last twenty years The second edition of this successful textbook provides an up to date introduction both to the topic and to the theory behind the algorithms The clear presentation makes the book suitable for advanced undergraduate or graduate courses whilst the coverage is sufficiently deep to make it useful for practising engineers and researchers The author concentrates on algorithms for the point to point message passing model and includes algorithms for the implementation of computer communication networks Other key areas discussed are algorithms for the control of distributed applications wave broadcast election termination detection randomized algorithms for anonymous networks snapshots deadlock detection synchronous systems and fault tolerance achievable by distributed algorithms The two new chapters on sense of direction and failure detectors are state of the art and will provide an entry to research in these still developing topics Distributed Algorithms Sam Toueg,Paul G. Spirakis,Lefteris Kirousis,1992 **Protocols by Invariants** Anneke A. Schoone,2004-08-19 Algorithms are a set of rules that specify a sequence of actions to be taken to solve a problem Distributed algorithms which are designed to solve many problems at once are conceptually far more complex than algorithms in a single processing unit environment When the number of simultaneous events becomes large human minds cannot keep track of all of them Naturally it is necessary to know whether a distributed algorithm will have the desired effect In this book Dr Schoone discusses assertational verification by system wide invariants for use in verifying the behavior of distributed algorithms The approach is entirely pragmatic the author considers many different examples over a wide range of algorithms and protocols This volume will be an essential purchase for all those with an interest in distributed algorithms Algorithms and Protocols for Wireless and Mobile Ad Hoc Networks Azzedine Boukerche,2009 Focuses on several aspects of wireless ad hoc networks particularly algorithmic methods and distributed computing with mobility and computation capability This book provides the crucial building foundation for the design and construction of the future generation of ad hoc networks
