and practitioners alike further the development of higher education as a field of study through public and ongoing

with the most up to date developments in the field Together the articles included in this volume alongside the section
introductions offer a rich and relevant picture of the dynamic state of higher education globally While both publications are

Outcomes of Income Diversification in Higher Education Martine Garland, 2019 **University Rankings, Diversity,**
and the New Landscape of Higher Education , 2019-02-18 University rankings are a relatively new phenomenon in higher
education Although quite an established practice in the U S it is only within the last decade that attempts to analyse
university performance have spread to the rest of the world and that we also have seen new global rankings appear rankings
attempting to measure university performance beyond national borders No wonder that this trend is accompanied by a
growing interest in studying rankings throughout the world This book is written as part of the effort to better understand
rankings and their effects on higher education A serious approach towards university rankings implies that rankings should
be analysed properly including the methods used and the indicators chosen and investigate the objectives claimed If
university rankings are considered as consumer information then everyone should have an interest in basing such guidance
on valid and reliable data and methodology A serious analysis should also discuss the wider implications of rankings as an
emerging phenomenon in higher education Consequently the contributions to this book investigate and analyse how different
rankings work how they reach their conclusions and on what data and methodology they are built Furthermore it provides a
critical reflection about the impact of rankings on higher education how and in what way rankings influence policy making
