Conservation In The Soviet Union:

Conservation in the Soviet Union Philip R. Pryde, 2008-12-11 First published in 1972 this was a systematic and comprehensive survey in English of resource management in the former Soviet Union analysing attitudes and accomplishments in the field of conservation of natural resources The book reviews the most important and unique features of Soviet natural resource management and conservation examines approaches toward the use of natural resources and the consequent problems and attempts to define the meaning of conservation in the Soviet Union Early chapters discuss the historical background of natural resource management in tsarist Russia and the Soviet Union and the legal and institutional framework Successive chapters deal with land and soil resources nature reserves wildlife and fish management mineral and forestry resources and environmental pollution The final chapter evaluates conservation attitudes and the political and philosophical implications of Soviet conservation The book includes an extensive bibliography of Soviet and foreign literature and a large and varied group of appendices covering key terminology legal documents and resource and environmental data

Models Of Nature Douglas R. Weiner, 2000-08-15 With a new afterword by the author A study of the early and turbulent years of the Soviet conservation movement Focusing on the period from the October Revolution to the mid 1930s from Lenin's rule to the rise of Stalin Douglas R Weiner studies the divergence between the growing ecological movement in the country and the state's social and economic policies The book offers a view of both sides of this dispute scientific conservation movements on the one hand and an industrializing nation's attitude toward science scientists nature and massive development on the other Weiner explains the development of pioneering conservation institutions state practices and ecological theory in the Soviet Union during the 1920s and why those developments were sidelined or quashed by Stalin The book provides a telling example of the social construction of science showing how the perceived political implications of rival ecological theories influenced Soviet scientists and chronicles the nature protection movement's conflicts with both the vigilantes of the Cultural Revolution and Stalin's first Five Year Plan which blatantly ignored potential environmental consequences in its quest to industrialize on a large scale The new afterword reflects upon the study's impact and discusses advances in the field since the book was first published Now in paperback this classic text is well suited for course use in Russian history environmental studies and history of science

Pryde, 1969 *Conservation of Nature in the Soviet Union*, 1972 **A Little Corner of Freedom** Douglas R.

Weiner, 1999-02-26 While researching Russia's historical efforts to protect nature Douglas Weiner unearthed unexpected findings a trail of documents that raised fundamental questions about the Soviet political system These surprising documents attested to the unlikely survival of a critical minded scientist led movement through the Stalin years and beyond It appeared that within scientific societies alternative visions of land use resource exploitation habitat protection and development were sustained and even publicly advocated In sharp contrast to known Soviet practices these scientific societies prided themselves on their traditions of free elections foreign contacts and a pre revolutionary heritage Weiner portrays nature protection activists not as do or die resisters to the system nor as inoffensive do gooders Rather they took advantage of an unpoliced realm of speech and activity and of the patronage by middle level Soviet officials to struggle for a softer path to development In the process they defended independent social and professional identities in the face of a system that sought to impose official models of behavior ethics and identity for all Written in a lively style this absorbing story tells for the first time how organized participation in nature protection provided an arena for affirming and perpetuating self generated social identities in the USSR and preserving a counterculture whose legacy survives today

The Spoils of Progress Marshall I. Goldman, 1972 An analysis of the forces that have been brought about the abuses of water air land and raw material in Russia examining both the drawbacks and advantages of state control and conservation Because industrialism had its beginnings in capitalist countries the existence of environmental disruption in socialist and communist societies has been largely ignored The truth is that pollution of natural resources plagues the planned economy and free enterprise system alike Rapid industrial growth rather than form of government is the prime agent causing environmental havoc and where socialist reality diverges from socialist theory the ecological balance of nature suffers as in any major industrial country Marshall I Goldman whose articles on the subject have appeared in Science The New York Times and The New Yorker brings this point home as she describes abuses of water air land and raw materials in Russia analyzing the forces that have been brought about the current situation and describing both the drawbacks and advantages of state control and conservation He devotes chapters to the pollution of Lake Baikal in Siberia remarking that Baikal is a unique lake in the world and all mankind will suffer from its desecration and to the Aral and Caspian seas which is literally in danger of drying up as a result and the construction of hydroelectric stations Proposals to restore the seas by building dams and reversing the flow of major rivers from north to south Reshaping the Earth may have equally profound and undesirable

results The book concludes by pointing out that the Soviet state is both manufacturer and polluter and its priorities lie with the increased production rather than conservation with progress rather than restraint Yet hopefully Goldman points to a number of beneficial state controls which if enlarged in the direction of restoring and protecting natural resources could have made Russia the most powerful and efficient of conservationists Appendixes contain selected laws on the environment the Conservation Law of the Russian Republic 1960 and the Water Law 1970 **East Europe (Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, Yugoslavia) ,1969**
