Constructing Mathematical Knowledge Paul Ernest, 2012-10-12 First published in 1994 This book and its companion volume *Mathematics Education and Philosophy An International Perspective* are edited collections Instead of the sharply focused concerns of the research monograph the books offer a panorama of complementary and forward looking perspectives They illustrate the breadth of theoretical and philosophical perspectives that can fruitfully be brought to bear on the mathematics and education The emphasis of this book is on epistemological issues encompassing multiple perspectives on the learning of mathematics as well as broader philosophical reflections on the genesis of knowledge It explores constructivist and social theories of learning and discusses the role of the computer in light of these theories Constructing Mathematical Knowledge Paul Ernest, 2012-10-12 First published in 1994 This book and its companion volume *Mathematics Education and Philosophy An International Perspective* are edited collections Instead of the sharply focused concerns of the research monograph the books offer a panorama of complementary and forward looking perspectives They illustrate the breadth of theoretical and philosophical perspectives that can fruitfully be brought to bear on the mathematics and education The emphasis of this book is on epistemological issues encompassing multiple perspectives on the learning of mathematics as well as broader philosophical reflections on the genesis of knowledge It explores constructivist and social theories of learning and discusses the role of the computer in light of these theories **Constructing Mathematical Knowledge ...**, 1994 **The Construction of New Mathematical Knowledge in Classroom Interaction** Heinz Steinbring, 2006-03-30 Mathematics is generally considered as the only science where knowledge is uniform universal and free from contradictions Mathematics is a social product a net of norms as Wittgenstein writes In contrast to other institutions traffic rules legal systems or table manners which are often internally contradictory and are hardly ever unrestrictedly accepted mathematics is distinguished by coherence and consensus Although mathematics is presumably the discipline which is the most differentiated internally the corpus of mathematical knowledge constitutes a coherent whole The consistency of mathematics cannot be proved yet so far no contradictions were found that would question the uniformity of mathematics Heintz 2000 p 11 The coherence of mathematical knowledge is closely related to the kind of professional communication that research mathematicians hold about mathematical knowledge In an extensive study Bettina Heintz Heintz 2000 proposed that the historical development of formal mathematical proof was in fact a means of establishing a communicable code of conduct which helped mathematicians make themselves understood in relation to the truth of mathematical statements in a coordinated and unequivocal way **The Mathematics in Our Hands** Christina M Krause, 2016-01-08 In her empirical study Christina Krause investigates how gestures can contribute to epistemic processes in social interactions She expands the traditional speech based approach to analyzing social processes of constructing mathematical knowledge by employing a multimodal perspective Adopting a semiotic approach she takes into account two functions of gestures as signs used by the

participants of the social interaction the representational function concerns the ways in which gestures take part in referring to a mathematical object in processes of knowledge construction and the epistemic function relates to the ways in which they can contribute to the performance of collective epistemic actions The results of this study reveal that gestures influence the epistemic process significantly more than previously thought and indicate factors underlying this influence

Constructing Mathematical Knowledge Using Multiple Representations: A Case Study of a Grade One Teacher Limin Jao,2009 This study examined how an elementary teacher fostered student mathematical understanding and the strategies that she used to help students learn mathematical concepts A case study of a Grade 1 teacher is described based on qualitative data from interviews and classroom observation sessions using a peer coaching model The evidence from the study suggests that this teacher benefited from professional development opportunities to gain deeper insights regarding her teaching practices There were five major findings 1 enthusiasm for improving her practices was necessary to successfully meet her goals 2 this teacher's role in the classroom was important to facilitate the construction of knowledge 3 the classroom was an environment where her students felt safe 4 a variety of tasks and strategies that students of varied abilities interests and aptitudes can enjoy were used and 5 multiple representations including the use of manipulatives were used to scaffold the construction of knowledge

Constructing Mathematical Knowledge & Building Numeracy Skills Steven Nisbet,2009 *Mathematical Knowledge: Its Growth Through Teaching* Alan J. Bishop,Stieg Mellin-Olsen,Joop van Dormolen,J. van Dormolen,1991-10-31 The book focuses on the genesis of mathematical knowledge in the classroom As with the first project the concerns are with fundamental analysis of the problem field and various approaches are presented in the book which will stimulate new thinking about research and teacher development

Forms of Mathematical Knowledge Dina Tirosh,2013-03-14 What mathematics is entailed in knowing to act in a moment Is tacit rhetorical knowledge significant in mathematics education What is the role of intuitive models in understanding learning and teaching mathematics Are there differences between elementary and advanced mathematical thinking Why can't students prove What are the characteristics of teachers ways of knowing This book focuses on various types of knowledge that are significant for learning and teaching mathematics The first part defines discusses and contrasts psychological philosophical and didactical issues related to various types of knowledge involved in the learning of mathematics The second part describes ideas about forms of mathematical knowledge that are important for teachers to know and ways of implementing such ideas in preservice and in service education The chapters provide a wide overview of current thinking about mathematics learning and teaching which is of interest for researchers in mathematics education and mathematics educators Topics covered include the role of intuition in mathematics learning and teaching the growth from elementary to advanced mathematical thinking the significance of genres and rhetoric for the

Social Constructivism as a Philosophy of Mathematics Paul Ernest,1998-01-01 Extends the ideas of social constructivism to the philosophy of mathematics developing a powerful critique of traditional absolutist conceptions of mathematics and proposing a reconceptualization of the philosophy of mathematics **Word Problems** Patricia Howard,2001-01-15 Students will use creative thinking skills while determining and using basic math operations to solve the problems *Mathematical Knowledge in Teaching* Tim Rowland,Kenneth Ruthven,2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently The issues to be examined in *Mathematical Knowledge in Teaching* are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing assessing and developing mathematical knowledge for teaching
