Abstract

This paper provides a non-technical introduction to some of the issues faced by a beginner trade-policy analyst: where to find data, how to calculate descriptive indices, what are the practical difficulties involved in measurement and calculation, how to perform simple statistical analyses of the effect of trade policies on domestic incomes, and how to approach *ex-ante* simulation analysis. Throughout the paper, we keep the level of exposition at a level that is accessible to a reader trained in economics but with limited proficiency in formal theory and econometrics. The last part of the paper, which describes Computable General Equilibrium (CGE) analysis, is not meant to enable the reader to perform such analysis but rather to read existing simulation results and understand what to look for.
