

Centralized information management for the construction industry

Information management is a key factor for the success of a construction project. The complexity of construction projects and the large amount of data generated require a centralized information management system. This system should be able to handle all the data generated during the project, from the initial planning to the final completion. It should also be able to provide a clear and concise overview of the project status at any given time. This is essential for the project manager to make informed decisions and to ensure that the project is completed on time and within budget.
