Atlas Of The Solar System:

Atlas of the Solar System Patrick Moore, Garry E. Hunt, Royal Astronomical Society, 1983 [Atlas of the Solar System](#)
Patrick Moore, 1990-06-02 Reveals the results of two decades of space exploration including an introduction to the solar system's origins and chapters on the sun, moons, the Earth, and the other planets [Atlas of the Solar System](#), 1981

Atlas of the Solar System David A. Hardy, 1979 [The Compact NASA Atlas of the Solar System](#) Ronald Greeley, Raymond Batson, 2001-11-29 The exploration of our solar system by spacecraft has been one of the greatest scientific achievements of the twentieth century. The mapping of other worlds has resulted from numerous space missions by NASA extending over many years. The data from these planetary missions have been synthesised by the US Geological Survey to produce detailed maps. Every planet, moon, or small body investigated in NASA missions is discussed and where appropriate mapped. Geological maps, reference maps, shaded relief maps, synthetic aperture radar mosaics, and colour photomosaics marvellously present the features of planets and their satellites. This is truly a road map of our solar system. All maps are fully indexed. The gazetteer lists the names of all features officially approved by the International Astronomical Union. The Compact NASA Atlas of the Solar System is the definitive reference atlas for planetary science. **The Atlas of the Solar System** Bill Yenne, 1987 **Atlas of Space** James Trefil, 2018 [The Atlas of the Solar System](#), 1983 **Solar System Maps** Nick Kanas, 2013-09-25 In recent years there has been increased interest in our Solar System. This has been prompted by the launching of giant orbiting telescopes and space probes, the discovery of new planetary moons and heavenly bodies that orbit the Sun, and the demotion of Pluto as a planet. In one generation our place in the heavens has been challenged, but this is not unusual. Throughout history there have been a number of such world views. Initially Earth was seen as the center of the universe and surrounded by orbiting planets and stars. Then the Sun became the center of the cosmos. Finally there was no center, just a vast array of galaxies with individual stars, some with their own retinue of planets. This allowed our Solar System to be differentiated from deep sky objects, but it didn't lose its mystery as more and more remarkable bodies were discovered within its boundaries. This book tells the exciting story of how we have conceptualized and mapped our Solar System from antiquity to modern times. In addition to the complete text, this story is made more vivid by 162 Solar System and planetary maps, diagrams, and images, over a third in color, direct quotes, and figures from antiquarian, contemporary, and Space Age documents and photographs that allow the reader to track how humans have viewed the Solar System from original sources. Nine tables compare the various world views, relative planetary positions, and components of the Solar System with each other. Broad in scope and rich in imagery, this book will draw the reader into the story of our Solar System and how it has been mapped since the beginning of recorded time.
